

# Bot Building in ActionBot Console

## Brief Overview

This article is a comprehensive guide to building a WalkMe ActionBot, **a chat interface that improves user engagement and simplifies the customer service experience** on your web application. By following this article, you can create the bot in the [WalkMe Console](#) and place it on any web application using a Launcher.

The WalkMe ActionBot serves as a container that holds and selects the appropriate conversation for the user based on their intent. You can easily create a container for all your bot conversations and tailor the chat interface to meet your users' needs.

## Use Cases

- **Customer service:** Use the WalkMe ActionBot to quickly respond to customer questions and improve satisfaction
- **Onboarding:** Use the WalkMe ActionBot to help new users navigate your service and improve retention
- **Technical support:** Create a bot to troubleshoot issues and reduce support tickets
- **Branding:** Customize the WalkMe ActionBot to fit your brand and provide a personalized experience for your customers

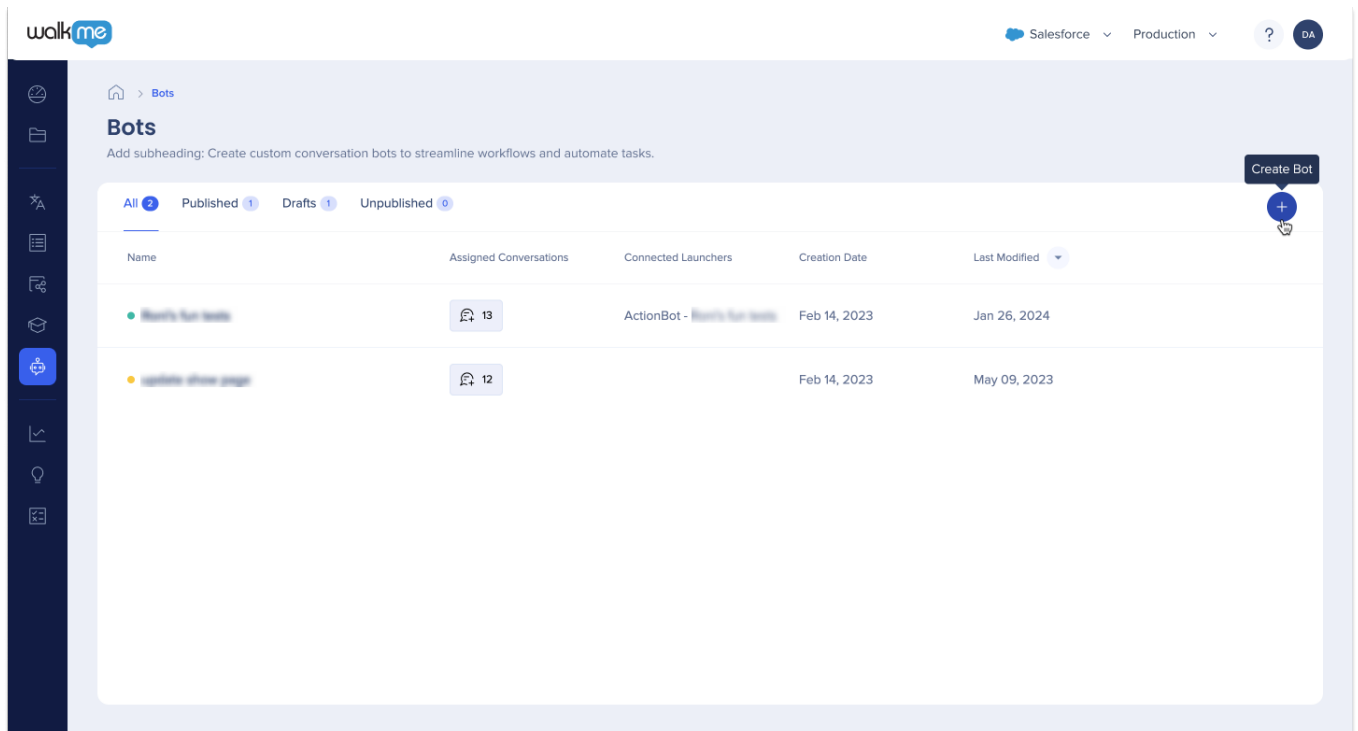

## Access

Bots are created in the [WalkMe Console](#) > **ActionBot tab** > **Bots tab**

1. Navigate direction through URL:

- US Data Center: [WalkMe Console](#)
- EU Data Center: [WalkMe Console](#)

2. On the [bots page](#), click the **Create Bot button** to open the bot building process

## [ActionBot Bots List on Console](#)

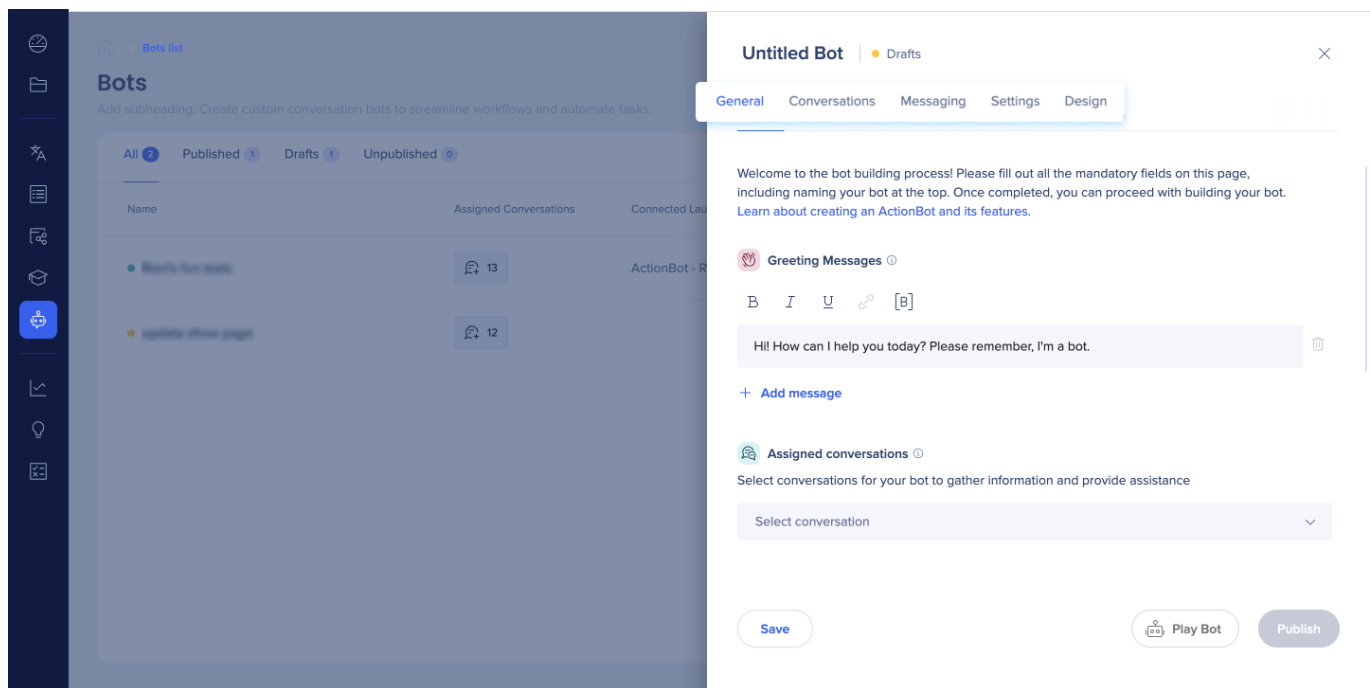

# The Bot Building Process

## Getting started

WalkMe Console now offers a user-friendly bot building process. After clicking the **Create Bot button** in the console and a side panel will open with five customizable tabs to create and perfect your bot.

To get started, you'll need to **fill out the mandatory fields located on the General tab**. These fields are required for your bot to function properly, so you must complete them before proceeding to other customization.

This section covers all the tabs in bot building. It aims to equip you with the knowledge and insights needed to navigate the process with confidence, regardless of your experience level.

## General tab

The initial step in building a bot leads users to the General tab, which consists of mandatory fields that need to be filled out before proceeding with further customization and settings.

End conversation messages ⓘ

B U I [B]

Ok, we are done! Thank you. Anything else?

🗑

+ Add new message

## Name

Enter a name for your bot at the top of the page in the **Untitled Bot** field.

- This serves as an identifier for you, end-users will not see this name

71 Stevenson Street, Floor 20 San Francisco, CA 94105 | 245 Fifth Avenue, STE 1501 New York, NY, 10016 | 421 Fayetteville St STE 215 Raleigh, NC 27601 [www.walkme.com](http://www.walkme.com)

## Greeting messages

This will be the first message to the user when the bot is initiated. Once the greeting message is displayed, the bot tries to match a conversation to the end-user's input.

- You can use the default message that's already in the field or create your own custom message
- Click **Add message** to create multiple greeting messages
  - If more than one greeting message is entered, the bot will choose a greeting message randomly

## Tip

- Call-to-action: The message should also have a call-to-action like "How can I help you today?" to encourage the end-users to write what are they looking to do using the bot
- Character limit: Greeting messages are limited to 255 characters

## Assign conversations

Select conversations that are relevant to the Bot. The bot will search these conversations and try to match one of its assigned conversations to the end-user's input.

- On publish, a validation will occur to ensure that at least 1 conversation is assigned to the bot
- Make sure that the bot and its assigned conversations are published to the same environment in order to see them in the bot
- Tags within the Bot Settings tab are now color-coded and reflect the Conversation's publish status

## Tip

**Tip:** If only 1 conversation was assigned to the bot, the bot will start directly from its assigned conversation skipping the stage of showing the greeting message and searching the right conversation

### [ActionBot Conversation List on Console](#)

## Add launchers

Select launchers to trigger the ActionBot.

- A launcher can only trigger one bot
- You can create a default launcher from the Add launchers selection or customize one from the WalkMe Editor. Once created, assign the action to open ActionBot and choose your desired bot. Optional: select your desired conversation

### [Launchers: Getting Started Guide](#)

## End conversation messages

This message appears when the conversation has ended successfully and the Bot has performed an action, or presented the final conversation node.

- You can use the default message that's already in the field or create your own custom message
- Click **Add message** to create multiple end conversation messages
  - If more than one message is entered, the bot will choose a message randomly

## Conversations tab

Once you've completed the General tab's required fields, you can begin customizing your bot and

adding additional features from the additional tabs.

3 ▼

 failed search attempts

The Conversations tab allows you to configure a suggested conversations box, which is displayed to end-users in your bot. The box corresponds to the assigned conversations and is designed to guide users towards the appropriate conversation.

There are two use cases for a suggested conversations box:

### Assign conversations for quick-start selection

Provides users with pre-assigned conversation options upon opening the bot, eliminating the need to type a message.

- Select a conversation from **Select conversation** dropdown
- Click **Add conversation** to add as many conversations as you'd like to the box
- Up to 4 suggestions will be visible at a given moment to the end-users
- The end-users can either start typing to filter the suggested conversations or scroll to see more

### Tip

Most end-users tend to choose suggestion rather than write to the bot, so we strongly suggest using this feature

### Assign conversations for failed user searches

Provides users with pre-assigned conversation options after unsuccessful user searches. These conversations will appear to end-users after a defined number of failed search attempts to help the user find what they may be looking for.

- Select a conversation from **Select conversation** dropdown
- Click **Add conversation** to add as many conversations as you'd like to the box
- Up to 4 suggestions will be visible at a given moment to the end-users
- Define how many search failures will prompt the failed search box (default is 3 attempts)

## Messaging tab

The Messaging tab allows you to customize your bot's messages, buttons, headings, and input field texts, giving you the power to create a unique and personalized brand experience.

Type your custom text in the fields to override the default texts. If a default text is not replaced with custom text, the bot will display the default text.

#### Tip

If your ActionBot has conversations in languages other than English, it is highly recommended to customize the bot messaging to avoid confusion for non-English speaking users, as default messages will appear in English otherwise.

## Suggested conversations box customization

- **Suggested conversations box heading:** This is a heading that appears when suggestions are presented to the end-user
- **Placeholder text for user input field:** This is placeholder text prompting the user to input their query
  - This only appears when the input field is not disabled (see Settings tab below for more information)

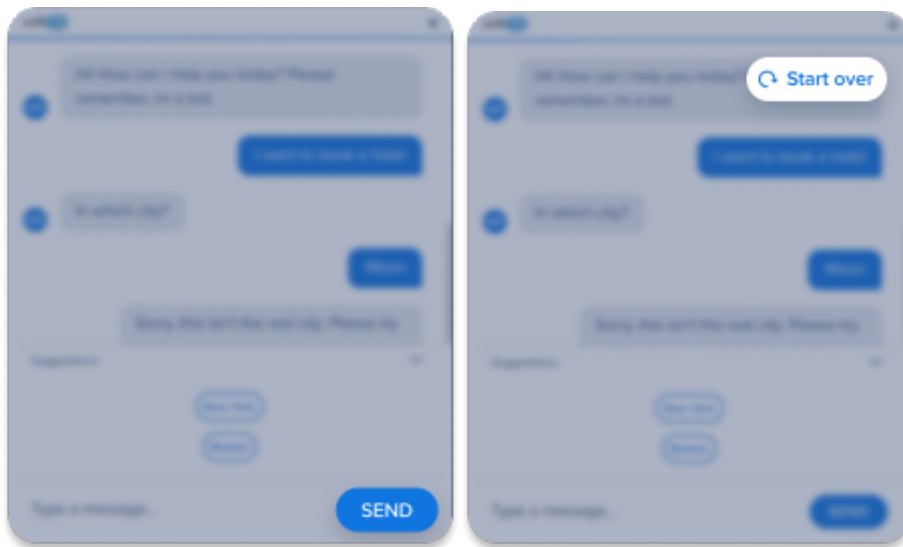

## Search responses

- **Message when search not matched:** If the bot cannot find a relevant WalkMe item based on the user's response, this message will be displayed
  - Click **Add message** to create multiple greeting messages
    - If more than one message is entered, the bot will choose a message randomly
- **Multiple conversation matches found:** This message appears when the bot found several conversations that meet the user's search

- In this case all matched conversations will appear as suggestions to encourage the end-user to pick from the conversations list
- **Only one WalkMe Item match found:** When only one matching WalkMe Item is found, this custom message will appear along with the selectable WalkMe Item
- **No suggestions match user's filter:** This appears when a user has typed to filter through a list of suggested conversations and no suggested conversations match

## Buttons

- **Send button text:** This button allows the end-user to submit their answer to the bot
- **Start Over button text:** This button allows the end-user to start a new conversation

Separator text for yesterday ⓘ

Yesterday

### Error handling

Start over due to Conversation update ⓘ

The dialog has been restarted automatically due to Conversation updates.

Start over due to Unpublished Conversation ⓘ

The dialog has been restarted automatically due to Conversation updates.

## Search input placeholders

- **Placeholder text for select suggestion input field:** This text instructs the user to type which suggested conversation they'd like to select to filter through the conversations list
- **Placeholder text for select suggestion when input field disabled:** This text instructs the

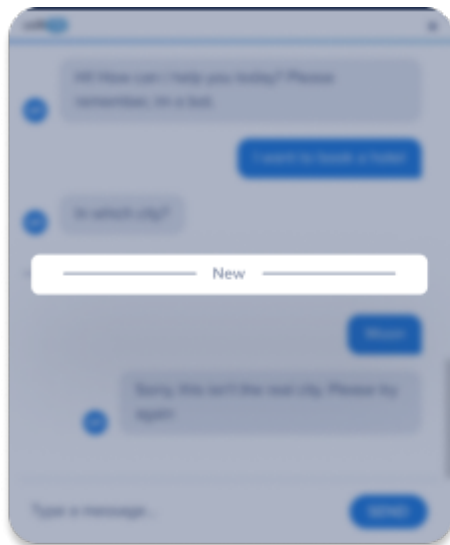

user to choose from the available suggestions

- This message is appears when the typing field for filtering conversations is disabled

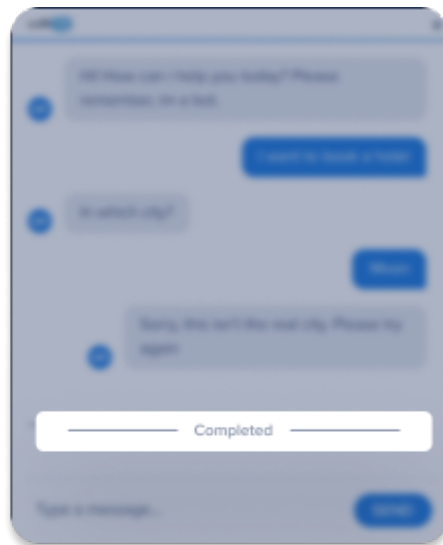

## Separators

The bot displays a separator to indicate the end of a successful conversation, a user-initiated restart, or a significant time gap between messages.

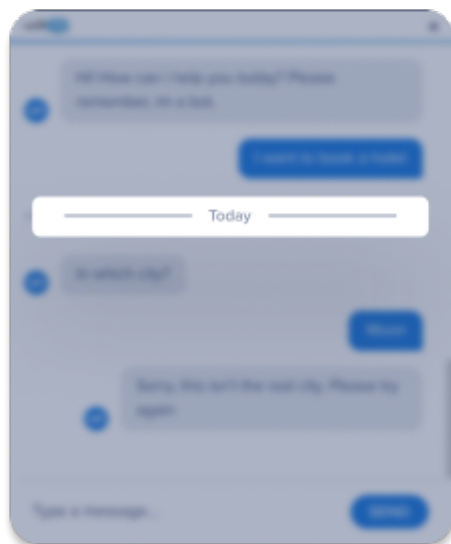

Separators are useful because it can bring clarity for users returning to their bot conversations and gives your bot a more polished look.

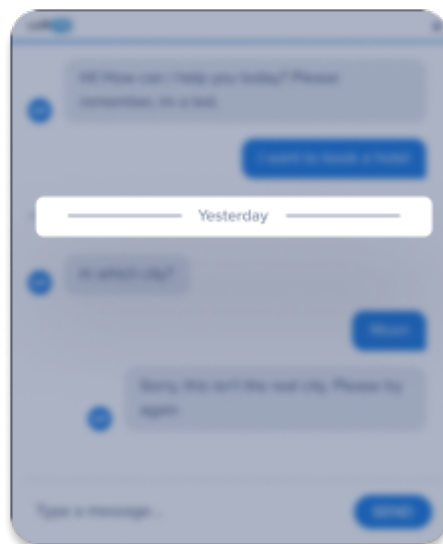

Separator text for new conversation

Separator text for successfully ended conversation

failed search attempts

## General settings

- **Select responses from suggestions list only:** If you prefer your end-user to avoid making mistakes or input answers you can't expect, you can disable the users' ability to type to the bot and force them to choose one of the suggested conversations by turning on this toggle
- **Disable interaction with dialog history:** Toggle on to disable the end-user's ability to continue a conversation after closing the ActionBot window
- **Integrate WalkMe Menu in bot content search:** Toggle on to allow the bot to search for more WalkMe content from the WalkMe Menu in addition to assigned conversations
- **Suggest WalkMe Menu items:** Toggle on to allow the bot to suggest WalkMe Menu items that were added to the End-User panel in the Menu Organizer

## Permalink initiator

Using a permalink enables the ActionBot to open automatically when a webpage loads, making your ActionBot even more likely to reach your end-users.

### How to use:

1. Select the bot or a specific conversation within the ActionBot for the selection
2. A permalink text will appear
3. Click **Copy link** to copy the text
4. Add this text to any URL within your ActionBot's system and the bot will open when the URL's page loads

## Live chat

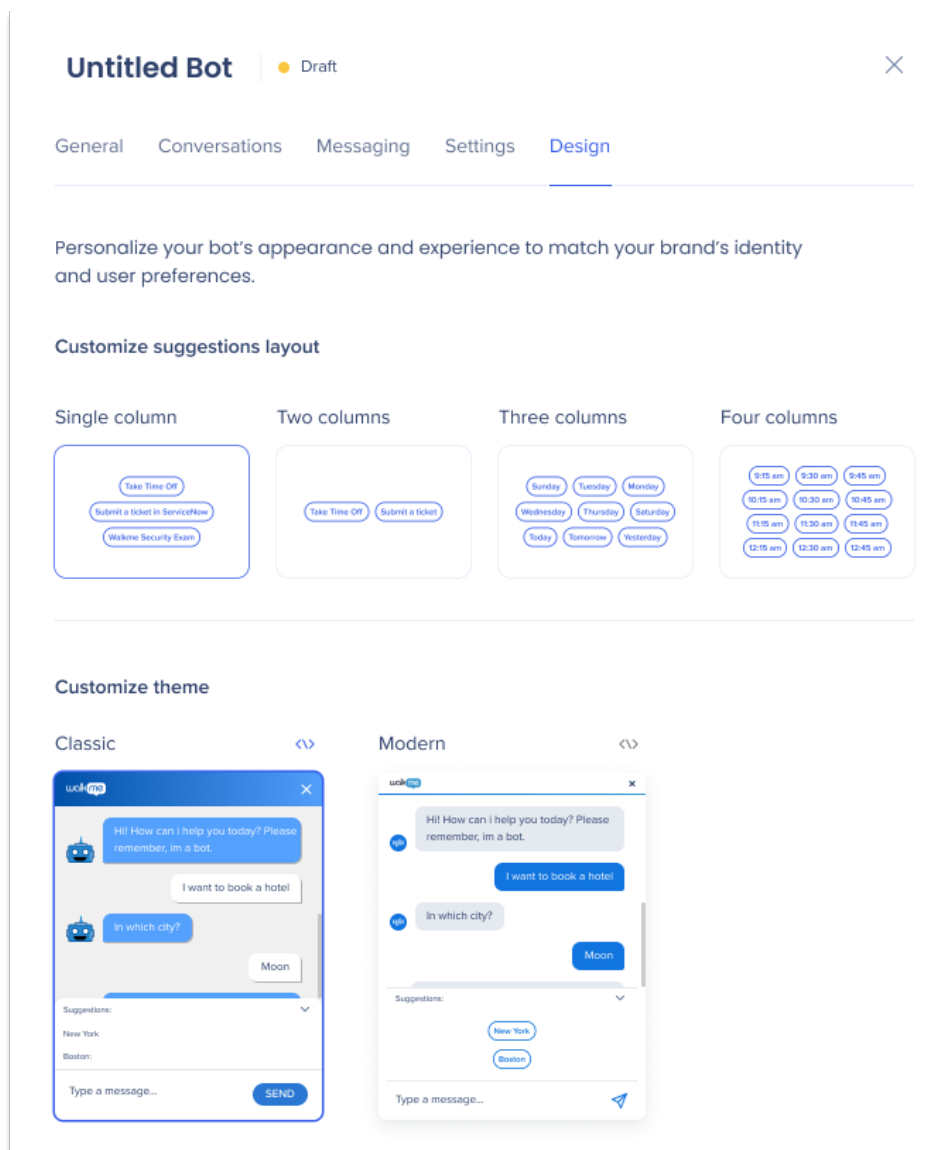

Adding a live chat feature to your ActionBot creates a natural conversation flow, provides immediate support, and may boost customer satisfaction. To enable this feature, connect your live chat vendor from the WalkMe Editor.

### [How To Connect ActionBot to a Live Chat Integration](#)

- **Live chat suggestion text:** Customize the text that appears in a suggested conversations box to prompt users to initiate a live chat
- **Text for Live chat button:** Customize the button text that appears to launch a live chat with your provider
- **Always show the Live chat button:** Toggle on to always display the Live Chat button in the bot container
- **Suggest Live chat when search fails:** Toggle on to prompt the end-user to initiate a Live Chat session after an unsuccessful attempt to start a conversation
  - Define how many search failures will prompt the Live chat (default is 3 attempts)

### Design tab

The Design tab allows you to enhance the overall look and feel of your bot. It gives you the flexibility to customize the layout and theme to align with your brand image, making your bot uniquely your own.

## Customize suggestions layout

If you are using a suggested conversation box, you can choose the layout for how the conversations will be displayed within the box.

## Customize theme

Select a theme, **Classic** or **Modern**, that matches your preference to ensure that the look and feel of your bot matches your desired aesthetic.

## Save/Play/Publish Your Bot

At the bottom of the tabs pages you'll find action buttons where you can save, play, and publish your bot.

- **Save:** Click **save** to save a draft of your bot at point during the process, ensuring that you don't lose any progress you've made
  - Any changes you make will only apply to your end-users once you *publish* the bot
- **Play Bot:** Click **Play Bot** to preview and test what your bot will look like. This feature enables you to make any necessary adjustments or improvements before publishing
  - Play Bot is not accessible until all of the mandatory fields on the General tab are completed
- **Publish:** Make your bot accessible to your end-users

1. Click **Publish**
2. A new window will appear
3. Select the environment you would like to publish your bot to
4. Click **Publish**
  - After the first save, you are able to publish the bot
  - Publishing also saves your recent changes and validates that all mandatory fields are completed
