

# Convert Smart Walk-Thru Steps to Auto-Steps

## Brief Overview

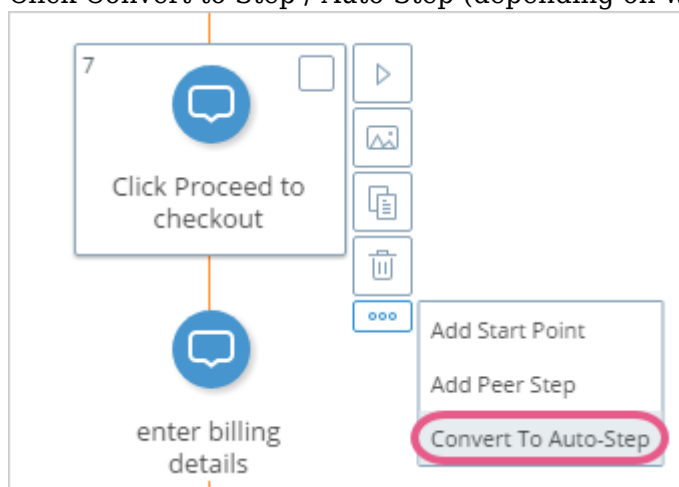

You can now convert previously captured Smart Walk-Thru Steps to Auto-Steps and vice versa. This makes it far easier to convert existing processes into automated ones, eliminating the need to recapture all the relevant steps!

**Pro-Tip:** *Newly converted Auto-Steps / Steps will be considered as new Steps in our analytics systems.*

## How to Convert Steps

### Converting a Single Step

1. Hover over the Step you wish to convert;
2. In Step Action Menu, hover over the three dots;
3. Click Convert to Step / Auto-Step (depending on whether the Step is regular or an Auto-Step):

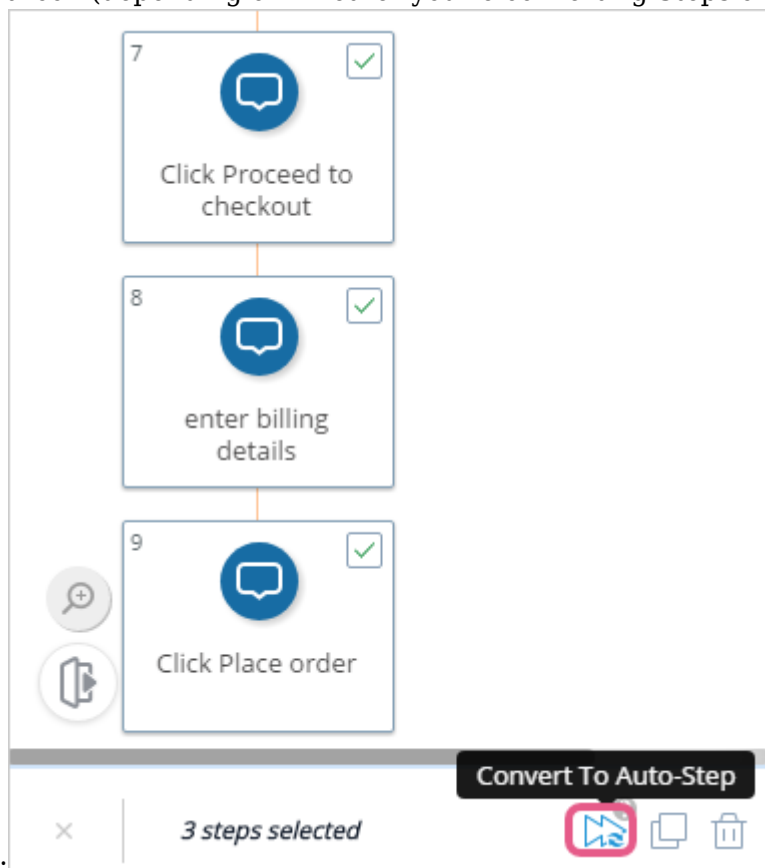

### Pro-Tips:

- When something is preventing a Step from being converted, the convert buttons will be disabled and you will see a tooltip explaining why the Step cannot be converted;
- When the Step is not convertible at all, no conversion button will be visible;
- When a 'Type' trigger Step is converted, its Title AND Description will both be inserted into the Auto-Step's Value for easier conversion and editing.

## Converting Multiple Steps

1. Manually select one or more steps you would like to convert;
2. Click the proper *convert* icon (depending on whether you're converting Steps or Auto-Steps) in

the footer of the Editor:

- If you select both Step types and click one of the convert buttons, only the relevant Steps will be converted. The others will remain the same.

### Pro-Tips:

- When selecting a mixture of supported and non-supported Step types, you will see a message explaining that only the supported Step types will be converted;
- When selecting a group of non-convertible steps, no conversion buttons will appear in the footer.

## Conversion Outcomes

Step conversion supports the following step triggers

Step Trigger	Auto-Step Action
--------------	------------------
