

CSS

Brief Overview

Cascading Style Sheets (CSS) allow you to customize the look and feel of a balloon including the layout, colors, and fonts.

The CSS feature in WalkMe allows for full customization of Walk-Thrus and Walk-Thru steps. Before entering the rules in the Customize CSS window, you can check if the CSS rule works by inserting it in the Custom CSS tab in the [Flow Tracker](#).

Digital Adoption Institute

- View the CSS lesson in the [Advanced Solution Building](#) course
- Don't have a DAI account yet? [Sign up here](#)

Use Cases

CSS use cases include the following:

- Insert an image or logo in a balloon
- Customize a *Welcome* ShoutOut for your site
- Change the width of or remove arrows from a balloon
- Change the text of a *Next* button

Note

Regular (not Classic) ShoutOuts are not supported by CSS. You can customize them directly in the [Visual Designer](#).

How It Works

CSS is a style sheet language used for describing the formatting of a document written in a markup language. When writing CSS, you will need to refer to the different components, or elements of balloons found in WalkMe apps. When typing into the Custom CSS window, WalkMe displays auto-complete options for selectors, properties, and values.

CSS can be added locally via the Rich Text Editor, or globally from the Customize menu accessed in the Admin Bar. Before entering the rules in the *Customize CSS* window, test it in the *Custom CSS* tab in the Flow Tracker.

Configuring Balloon Components

Each Balloon includes a number of components (elements) that can be customized with CSS. For example, you can target the title section of a balloon by using this class: *.walkme-custom-balloon-title* (**see below for a full list of classes**).

Global vs. Local Rules For Balloons

CSS can be applied globally or locally. Local CSS overrides all other design and can be applied from the Rich Text Editor in the **Interaction tab**.

Global CSS can be accessed from the settings dropdown in the Editor.

Using the local CSS editor (Rich Text Editor) makes it easy to customize a single ShoutOut.

If you are customizing a single ShoutOut on the global level, you must enter the ShoutOut's **ID*** before the class that identifies the balloon section.

Local level example: `.walkme-custom-balloon-title`

Global level example: `#walkme-balloon-XXXXXXX.walkme-custom-balloon-title)`

Tip

For Walk-Thrus, the ID can be found in the Walk-Thru Settings Menu under Advanced Settings:

Using !Important

By default, the WalkMe theme design overrides any other design changes to a balloon or Walk-Thru. In order for CSS to be applied, the CSS rule must contain **!important** to ensure that it overrides the default styling.

Example:

```
#walkme-balloon-1760356.walkme-custom-balloon-title {
color: #000 !important;
}
```

Configurable Components

	div	Examples of Editable Attributes
1	.walkme-custom-side-border	This element is the left side balloon border: - display - background
2	.walkme-custom-balloon-separator	This element is the separator on the bottom third of the balloon: display
3	.walkme-custom-balloon-title	This element is the balloon header: - text-align - font-color - font-size - font-family - padding - margin
4	.walkme-custom-balloon-content	This element is the balloon text: - text-align - font-color - font-size - font-family - padding - margin

5	.walkme-custom-balloon-subtext	This element is step number: • text-align • font-color • font-size • font-family • display
6	.walkme-custom-balloon-back-button	This element is the back button: • color • font-size • font-family • width • height • background • border-radius
7	.walkme-custom-balloon-next-button	This element is the next button: • color • font-size • font-family • width • height • background • border-radius

Most Common CSS Customizations

Remove the 'X' button from a balloon

```
.walkme-custom-balloon-close-button {
display:none !important;
}
```

Remove the side borders of a balloon

```
.walkme-custom-side-border{
display: none !important;
}
```

Change the balloon side border color

```
.walkme-custom-side-border{
background-color: red !important;
}
```

Change **balloon background color**

```
#walkme-balloon-XXXXXXX .walkme-custom-balloon-content-wrapper{  
background-color: green !important;  
}
```

Alter the width of a balloon

```
#walkme-balloon-xxxxxxx {  
width: 300px !important;  
min-width: 0 !important;  
padding: 10px !important;  
}
```

Alter **the width of a ShoutOut balloon**

```
.wm-shoutout-XXXX.wm-outer-div {  
width: XXXpx !important;  
}
```

Remove an arrow from a balloon

```
.walkme-custom-balloon-arrow.walkme-custom-flow-balloon-xxxxxxx{  
display: none !important;  
}
```

Remove step numbers from a balloon

```
.walkme-custom-balloon-subtext {  
display: none !important;  
}
```

Alter the text of the next button

Note

Text & Multi-Language settings are no longer in Insights, and can instead be accessed from the Translations page in the [WalkMe Console](https://console.walkme.com) at console.walkme.com. [Learn more](#).

```
div#walkme-balloon-xxxxxxx
```

```
button.walkme-custom-balloon-button.walkme-custom-balloon-normal-button.walkme-custom-balloon-next-button.walkme-action-next.walkme-click-and-hover span.walkme-custom-balloon-button-text{  
font-size: 0 !important;  
}
```

```
div#walkme-balloon-xxxxxxx button.walkme-custom-balloon-button.walkme-custom-balloon-normal-button.walkme-custom-balloon-next-button.walkme-action-next.walkme-click-and-hover span.walkme-custom-balloon-button-text:before {  
content: 'new text' !important;  
visibility: visible !important;  
font-size: 12px !important;  
}
```

Alter the text for the back button

```
button.walkme-custom-balloon-button.walkme-custom-balloon-weak-button.walkme-custom-balloon-back-button.walkme-action-back.walkme-click-and-hover span.walkme-custom-balloon-button-text
```

Alter the text for the done button

```
button.walkme-custom-balloon-button.walkme-custom-balloon-normal-button.walkme-custom-balloon-done-button.walkme-action-done.walkme-click-and-hover span.walkme-custom-balloon-button-text
```

Change the global WalkMe font

```
#walkme-menu *,
#walkme-player *,
.walkme-custom-balloon-outer-div *,
.wm-shoutout *,
.walkme-survey-balloon *,
.walkme-tooltip-outer-div *,
.walkme-custom-launcher-outer-div,
.walkme-icon-image-div.walkme-launcher-image-div * {
font-family: "Roboto",Tahoma,Arial,Verdana,sans-serif !important; /* Add desired Font-Family rule
here*/
}
```

Note

The font-family rule must be coded on every page that WalkMe is implemented on. If the font rule isn't coded on a particular page, WalkMe will not be able to pull and render the font correctly.

Change the font of a Launcher

```
.walkme-icon-image-div.walkme-launcher-image-div {
font-family: /*your font here*/ !important;
}
```

Change the font of a balloon

```
.walkme-custom-balloon-title,
.walkme-custom-balloon-content,
.walkme-custom-balloon-button-text {
font-family: /*your font here*/ !important;
}
```

Change the font of a widget

```
#walkme-menu.walkme-penguin,
#walkme-main .walkme-title {
font-family: /*your font here*/ !important;
}.walkme-menu.walkme-penguin .walkme-icon {
font-family: /*your font here*/ !important;
}
```

Change the font of a SmartTip

```
.walkme-tooltip-content-wrapper .walkme-tooltip-content {
```

```
font-family: /*your font here*/ !important;
}
```

Hide tooltips in SmartTips

```
.walkme-tooltip-smarttip-XXXXX{
Display: none !important;
}div.walkme-custom-tooltip-arrow-top.walkme-custom-tooltip-item-YYYYY{
Display: none !important;
}
```

Apply Z-Index changes to all the Walk-Thru balloons

```
div.walkme-custom-walkthru-xxxxx.walkme-custom-simple-step {
z-index:0 !important;}
div.walkme-custom-walkthru-xxxxx.walkme-custom-balloon-arrow {
z-index:0 !important;}
```

Open / expand categories

Note

Ireland is not supported.

```
div.walkme-menu.walkme-penguin.walkme-override .walkme-category .walkme-activatable,
div.walkme-menu.walkme-penguin .walkme-override .walkme-category .walkme-activatable {
display: block !important;
}
```

```
div.walkme-menu.walkme-penguin.walkme-override .walkme-category.walkme-opened .walkme-
activatable, div.walkme-menu.walkme-penguin .walkme-override .walkme-category.walkme-opened
.walkme-activatable, div.walkme-menu.walkme-penguin.walkme-override .walkme-category .walkme-
activatable.walkme-invisible,
div.walkme-menu.walkme-penguin .walkme-override .walkme-category .walkme-activatable.walkme-
invisible {
display: none !important;
}
```

```
div.walkme-menu.walkme-penguin.walkme-override .walkme-deployable.walkme-category.walkme-
override .walkme-activatable, div.walkme-menu.walkme-penguin.walkme-override .walkme-
activatable.walkme-category.walkme-override .walkme-activatable, div.walkme-menu.walkme-
```

```
penguin .walkme-override .walkme-deployable.walkme-category.walkme-override .walkme-
activatable,
div.walkme-menu.walkme-penguin .walkme-override .walkme-activatable.walkme-category.walkme-
override .walkme-activatable {
border-bottom: none !important;
}
```

```
div.walkme-menu.walkme-penguin.walkme-override .walkme-deployable.walkme-category.walkme-
override .walkme-activatable .walkme-deployable-icon,
div.walkme-menu.walkme-penguin.walkme-override .walkme-activatable.walkme-category.walkme-
override .walkme-activatable .walkme-deployable-icon,
div.walkme-menu.walkme-penguin .walkme-override .walkme-deployable.walkme-category.walkme-
override .walkme-activatable .walkme-deployable-icon,
div.walkme-menu.walkme-penguin .walkme-override .walkme-activatable.walkme-category.walkme-
override .walkme-activatable .walkme-deployable-icon {
height: 20px !important;
padding-top: 4px !important;
margin-left: 12px !important;
width: 26px !important;
}
```

```
div.walkme-menu.walkme-penguin.walkme-override .walkme-deployable.walkme-category.walkme-
override .walkme-activatable .walkme-text, div.walkme-menu.walkme-penguin.walkme-override
.walkme-activatable.walkme-category.walkme-override .walkme-activatable .walkme-text,
div.walkme-menu.walkme-penguin .walkme-override .walkme-deployable.walkme-category.walkme-
override .walkme-activatable .walkme-text, div.walkme-menu.walkme-penguin .walkme-override
.walkme-activatable.walkme-category.walkme-override .walkme-activatable .walkme-text {
padding: 0 !important;
}
```

```
div.walkme-menu.walkme-penguin .walkme-category > .walkme-deployable-row > .walkme-
deployable-icon:before, div.walkme-menu.walkme-penguin * .walkme-category > .walkme-
deployable-row > .walkme-deployable-icon:before {
content: "e60a";
}
```

```
div.walkme-menu.walkme-penguin .walkme-category.walkme-opened > .walkme-deployable-row >
.walkme-deployable-icon:before, div.walkme-menu.walkme-penguin * .walkme-category.walkme-
opened > .walkme-deployable-row > .walkme-deployable-icon:before {
content:"e609";
}
```

Make the default body text size match the header size

```
.walkme-custom-balloon-title,  
.walkme-custom-balloon-content {  
    font-size: 12px !important;  
}
```

Note

If you have related CSS already set inside of an individual step, you will need to remove that CSS for the global setting to take effect. Local CSS always overrides global CSS

Reduce the white space in balloons that do not have the Next/Back button

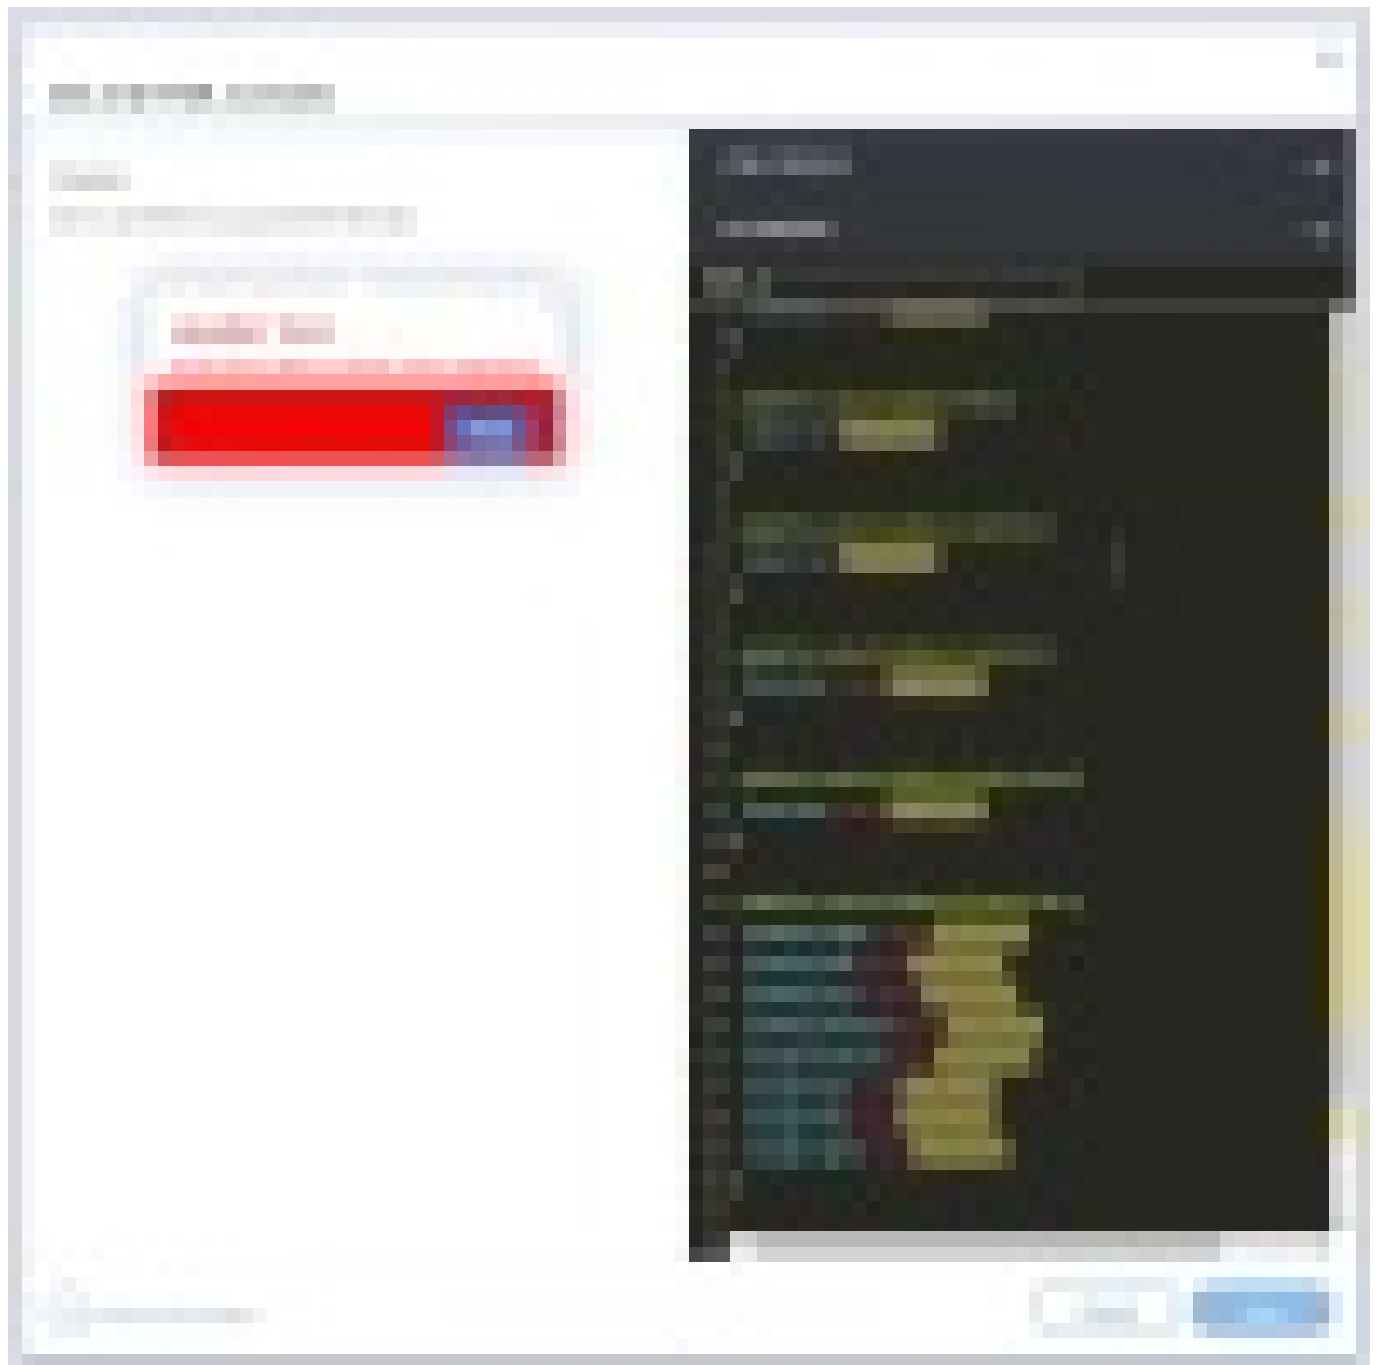

```
.walkme-custom-balloon-bottom-div:has(.walkme-custom-balloon-no-buttons-div)  
{  
    display: none !important;  
}  
  
.walkme-custom-balloon-inner-div:has(.walkme-custom-balloon-no-buttons-div) {  
    padding-bottom: 20px !important;  
}
```

Find & Replace Shortcuts

You may use the following keyboard shortcuts (Windows / Mac) to Find and Replace in the custom CSS console:

- **Find:** Ctrl-F / Cmd-F (press enter to find next, Shift-Enter to find previous)
- **Replace:** Ctrl-R / Cmd-R
- **Jump to line:** Ctrl-J / Cmd-J

Watch a quick demo below:

Publish Changes in CSS

In order for changes in CSS to become live, you will need to publish.

Some changes that can be applied to your account aren't reflected in the *Publish* menu. These include changes that are made to the following items and more:

- [Menu Organizer](#)
- Any changes that you apply in the [Customize menu](#) (including changes to the widget and [custom CSS](#))
- Changes that were applied to the *Settings* menu
- [Global segments](#)

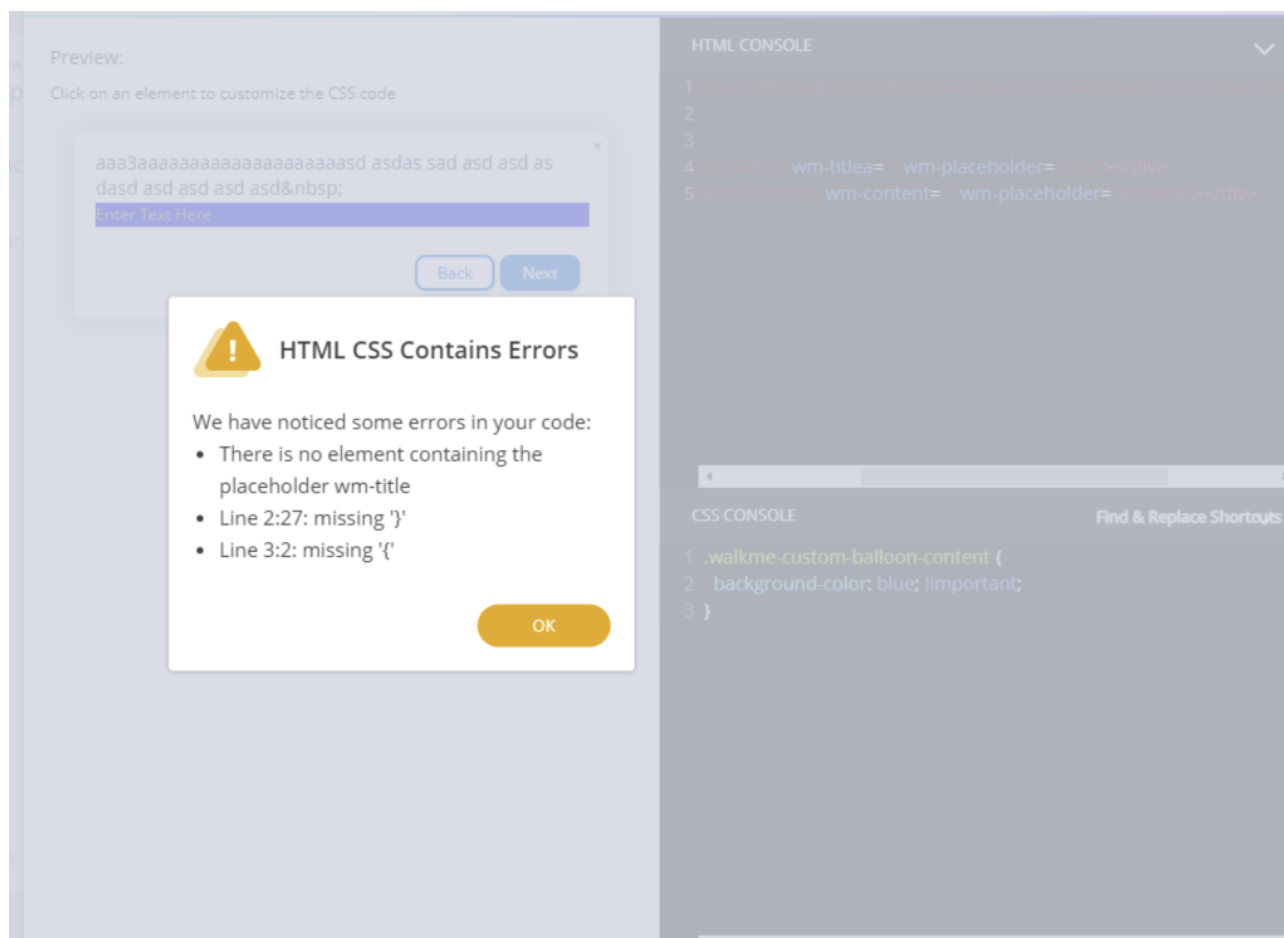

This is because any change in your account that doesn't relate to a specific WalkMe item will be pushed to your environment as soon as you publish any new or existing content. This means that if you've recently applied changes to one of your global segments, and then published an unrelated Walk-Thru, the changes made to your segment will be published as well.

To publish changes you've made to the CSS, perform a "[settings publish](#)" as follows:

1. Click **Publish** in the Admin Bar
2. Open the **Publish** tab
3. If all you are doing is publishing changes to CSS, deselect all items
4. Click **Publish**

Note

- In case of an error, a validation message will appear in the CSS Console after you click **Save**
- Error messages are also available for HTML - please request access from your Customer Success Manager or WalkMe contact if you would like this enabled

Technical Information

- When changing text using CSS, keep in mind that this may override any translations added in the [Text & Multi-Language page in the Console](#)
- The following terms are not supported and may cause custom CSS to not take effect:
 - @import
 - expression
 - javascript
 - -moz-binding
 - -o-link
 - behavior
