

Edit on Page

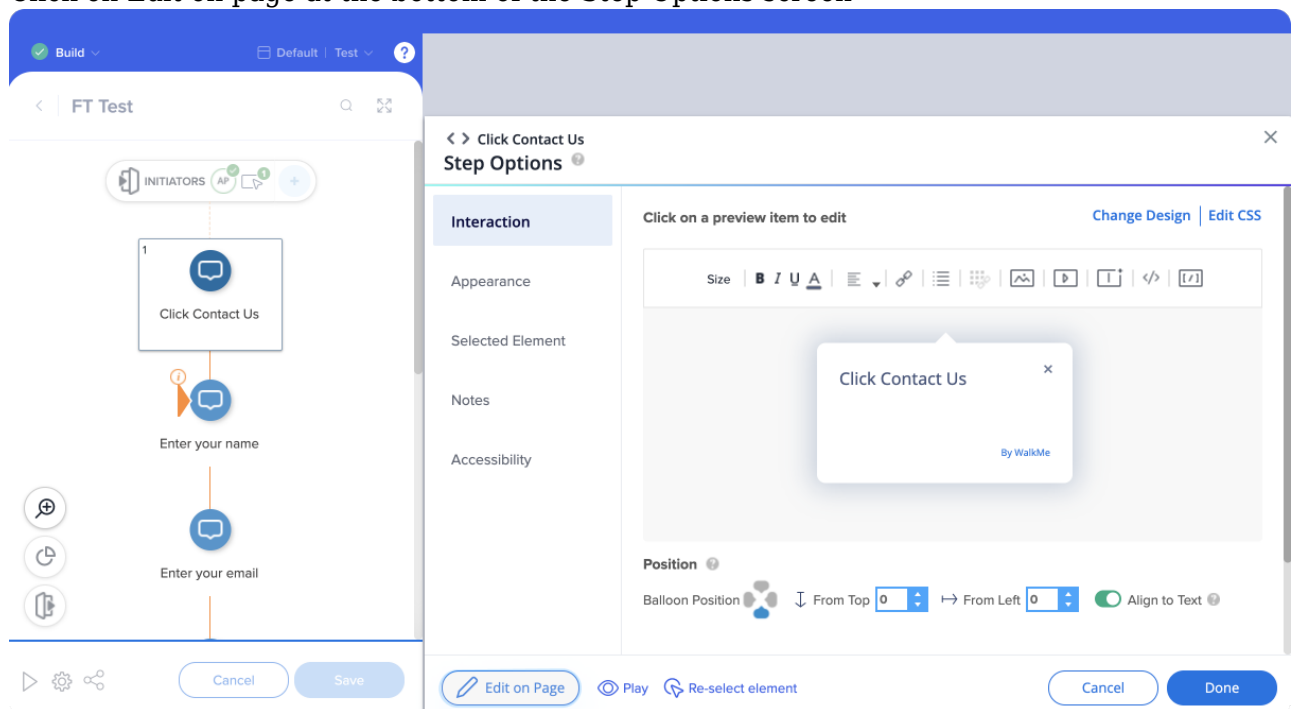

Brief Overview

You can use the Edit on page feature to simplify the content creation experience by building and customizing Smart Walk-Thrus, Launchers, and ShoutOuts directly on page, instead of via the editor.

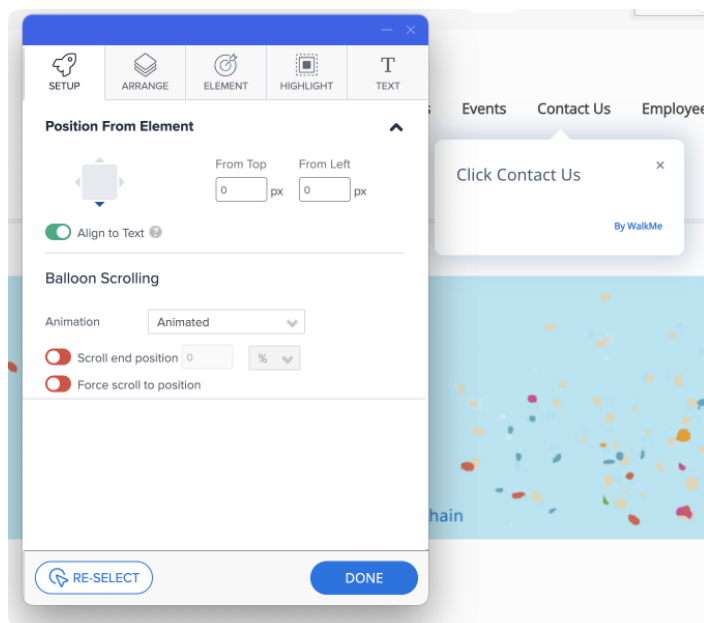

Customizing your items on page allows greater control and ease of building. You can see how changes will affect the appearance of your item as you make them, instead of going back and forth between the Editor and the screen.

How to Access

1. Make sure your editor is connected to the page you're building on
2. Open the item you'd like to edit
3. Click on Edit on page at the bottom of the Step Options screen

4. The Edit on page tool will open

How It Works

There are several options available to further customize items directly on the page as you are building:

Position

- Adjust the position of the item on the screen

Gallery

- Select a new design from the gallery, including ones that you have previously created

Design

- Change the text, font, font size, and color
- Adjust the hover and click states
- Adjust the borders and padding

Action

- Link the item to another one while creating it, instead of through settings after the creation process

Note

- The feature requires [Editor app version 4.14 and above](#)
- “Re-Select” functionality doesn’t work if the element is inside an iframe. To overcome the limitation, exit the “Edit on screen” mode and reselect the element via the regular item editing screen:
