

Drag and Drop Widget

Brief Overview

Drag and drop the WalkMe widget around the page.

This is an enabled feature

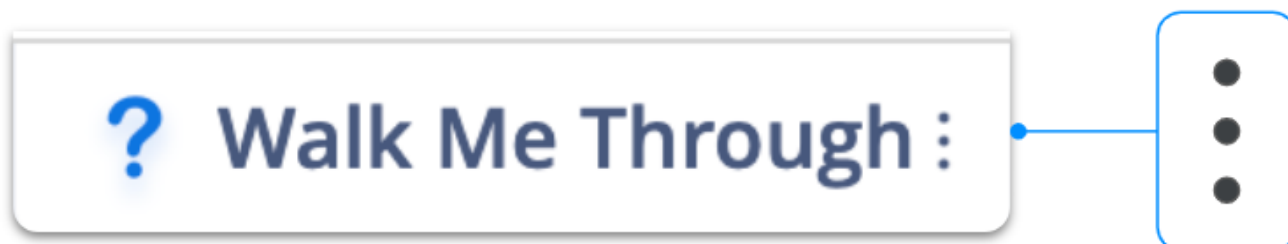

To enable drag and drop, contact your WalkMe Customer Success Manager.

How to use

After your CSM has enabled the feature:

1. Go to the **Editor > Customize Player > Settings** tab.
2. Select the **Allow Drag and Drop Widget** checkbox.

Drag & Drop feature will **add three dots** to the WalkMe widget to indicate to the users that they can drag it from that location to another location.

There are **12 anchor points**. When the user approaches an anchor point on the page, a dotted rectangle will appear to indicate that anchor, into which the Widget can be placed.

Drag and drop settings will be published as part of the settings publish, same as widget configuration and customization.

Solutions Gallery

Check out the **Drag and Drop Feature Highlight** Solution in the Solutions Gallery! This helps users get acquainted with their new drag and drop widget.

Limitations

- Sites or pages that don't support drag and drop events can't supported by this feature.
- Sites or pages which load [prototype.js](#) framework won't be able to drag and drop since this framework blocks WalkMe drag and drop event listeners.
- Due to the 12 location anchor layout, Zambezi and Danube widget types are not supported.
- California widget only has 4 available drag and drop anchors.
