

Editor Settings

Brief Overview

WalkMe Editor holds many important settings for the functionality across all WalkMe apps.

You can access the Editor settings by clicking on the setting icon in the top right corner and selecting System settings:

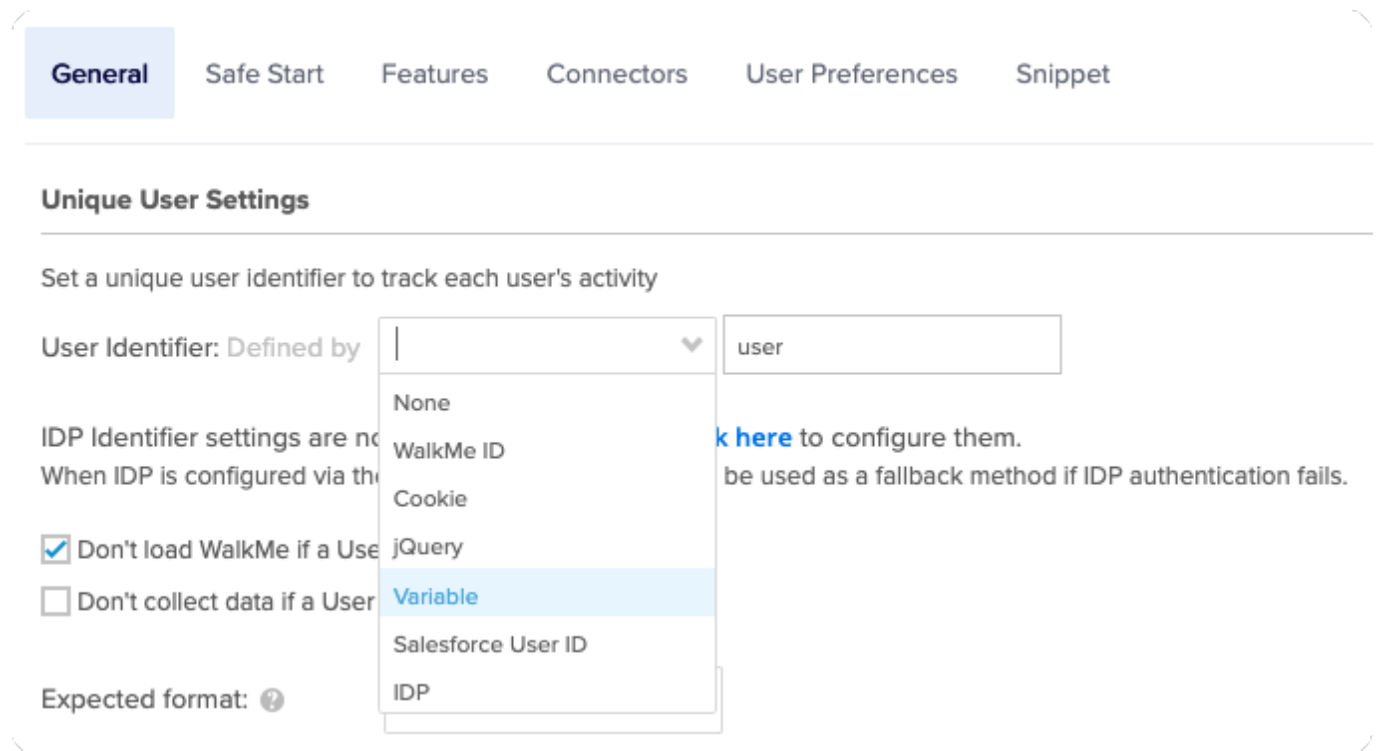

General Settings

Unique User Settings

When building your WalkMe Solutions, consider how you would like to collect data about your end users. For example, when you look up progress or usage supports in Insights, would you like users to be identified by their email address, anonymous ID number, or a unique identifying element on their

screen. Configure Unique User Settings so all your analytics can be collected in the same terms as the information on your own site, providing a close integration between WalkMe Insights and your own site by identifying the user in the same way.

General Safe Start Features Connectors User Preferences Snippet

Unique User Settings

Set a unique user identifier to track each user's activity

User Identifier: Defined by | user

- None
- WalkMe ID
- Cookie
- jQuery
- Variable**
- Salesforce User ID
- IDP

IDP Identifier settings are not available when IDP is configured via the [IDP configuration page](#). [Click here](#) to configure them.

Don't load WalkMe if a User is not logged in. This setting will be used as a fallback method if IDP authentication fails.

Don't collect data if a User is not logged in.

Expected format: ?

[Unique User Settings \(UUID\)](#)

Analytics Properties

Use analytic properties as custom Insights attributes in the form of variables, jQuery selectors, and website cookies, to better filter your reports for more granular user information.

General Safe Start Features Connectors User Preferences Snippet

Analytics Properties 

To display identifiable data in WalkMe Analytics (e.g. user name, role, etc.), set your preferred data properties.

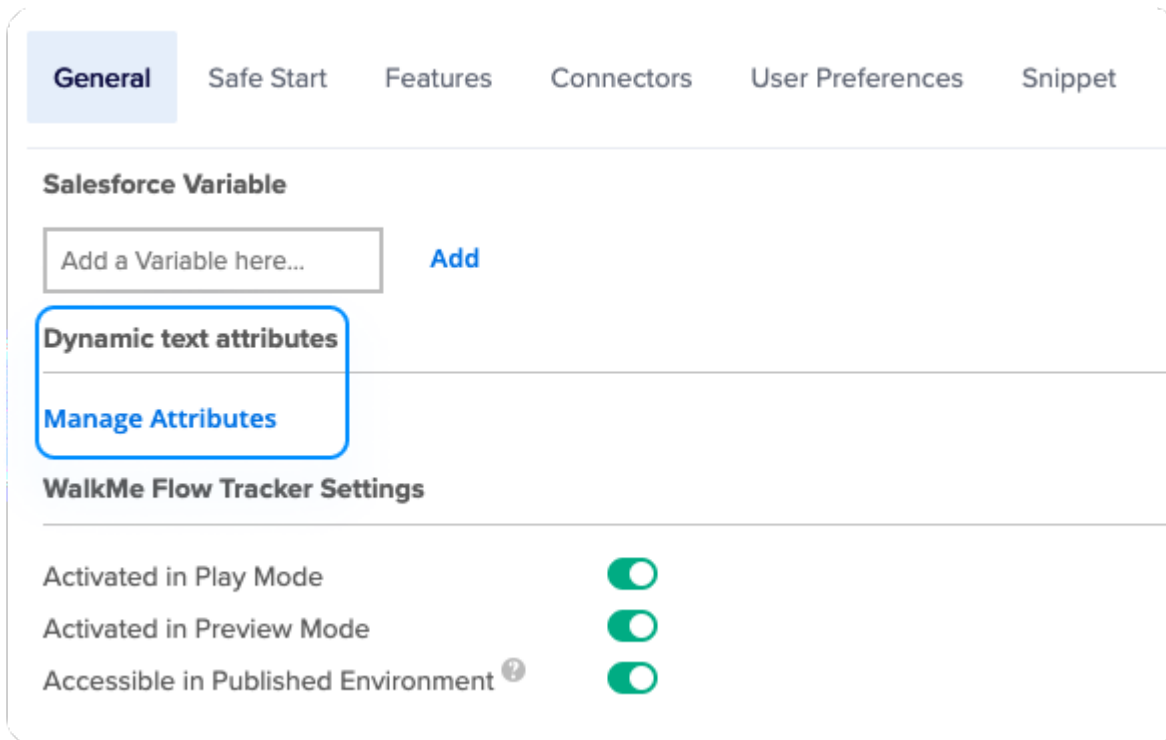

Name Type Role Status Info

Name:	Defined by	Variable ▾	Your variable name	
Type:	Defined by	Variable ▾	Your variable name	
Role:	Defined by	Variable ▾	Your variable name	
Info:	Defined by	Variable ▾	Your variable name	

[Using Analytics Properties](#)

Dynamic Text Attributes

Dynamic text attributes allow you to create dynamic content and rules. Once saved, they can be used in rules (for comparison of text / numbers / dates) and as dynamic text in items.

Flow Tracker Settings

- **Activated in Play Mode** - Flow Tracker automatically launches when a Walk-Thru is played from Editor.
- **Activated in Preview Mode** - Flow Tracker automatically launches when Preview Mode is enabled.
- **Accessible in Published Environment (QA-Related)**- Flow Tracker is accessible in the Published Environment but does not start automatically. The keyword 'walkmetracker' is used in the Player Menu Search to activate Flow Tracker.

Screenshots Settings

Choose one of the following settings:

- **Capture Screenshots:** Selecting this option will enable the screenshot feature
- **Blur Screenshots:** Blur the screen in the screenshot to protect sensitive information while keeping the balloon and element clear
- **Do not capture screenshots:** This will disable the feature and prevent screenshot from being captured

Choose your desired resolution:

- **Optimal:** Default setting - Optimized for high performance
- **High:** Saves image in its original resolution

Element Library

WalkMe's Element Library feature is made up of pre-captured, system-specific elements created using WalkMe best practices. Users can build deployables by selecting an element from the Element Library, outlined in green instead of the standard blue, allowing WalkMe to maintain and update the connected deployable through major platform releases.

Solutions Distribution

My Solutions are user-generated templates that allow you to stay up-to-date with your organization or partner's latest brand guidelines, campaign, or content recommendations by easily sharing content between accounts. Then, using a secured distribution key, you can easily share the solution package that you've built between editor accounts.

Auto-Step Settings

Auto-Steps allow customers to automate repetitive processes that end-users will have to complete multiple times. By default, a ripple effect will show when an Auto-Step has been clicked. This can be disabled in the settings.

User Preferences

Connected Browser (per system)

The screenshot shows a dialog box titled "User Preferences" with a close button (X) in the top right corner. The dialog has several tabs: "General", "Safe Start", "Features", "Connectors", "User Preferences" (which is selected and highlighted), and "Snippet".

Under the "User Preferences" tab, there is a section titled "Connected Browser" with a blue border. It contains four radio button options:

- Chrome
- Edge Chromium
- Firefox (version 54 and above)
- IE (version 11 and above)

Below these options is the text: "Click the button below to add the selected extension". There is a blue button labeled "Add Chrome Extension".

Below the button is the text: "if installation doesn't start, [click here](#) to copy the installation link, and paste it into your browser's address bar".

Below that is a section titled "Editor Layout". It contains the text: "Set the relations between the Editor to the browser window you are working with". There are two radio button options:

- Side By Side [?]
- Always On Top [?]

At the bottom of the dialog, there are three buttons: "Publish settings" (with a question mark), "Admin Settings" (with a gear icon), "Cancel", and "Save".

Editor Layout

Two layout modes are available for the Editor:

1. **Side-by-Side (SBS)**- Allows for the Editor and the connected browser to align themselves side-by-side.

This is the default layout. It is recommended for working on most websites.

- To align the Editor to the connected browser make sure you have an instance of the connected browser open and press the SBS button.
- The Editor will align itself side-by-side to the connected browser's instance that is in the foreground.

2. **Always on Top**- Positions the Editor on top all other windows.

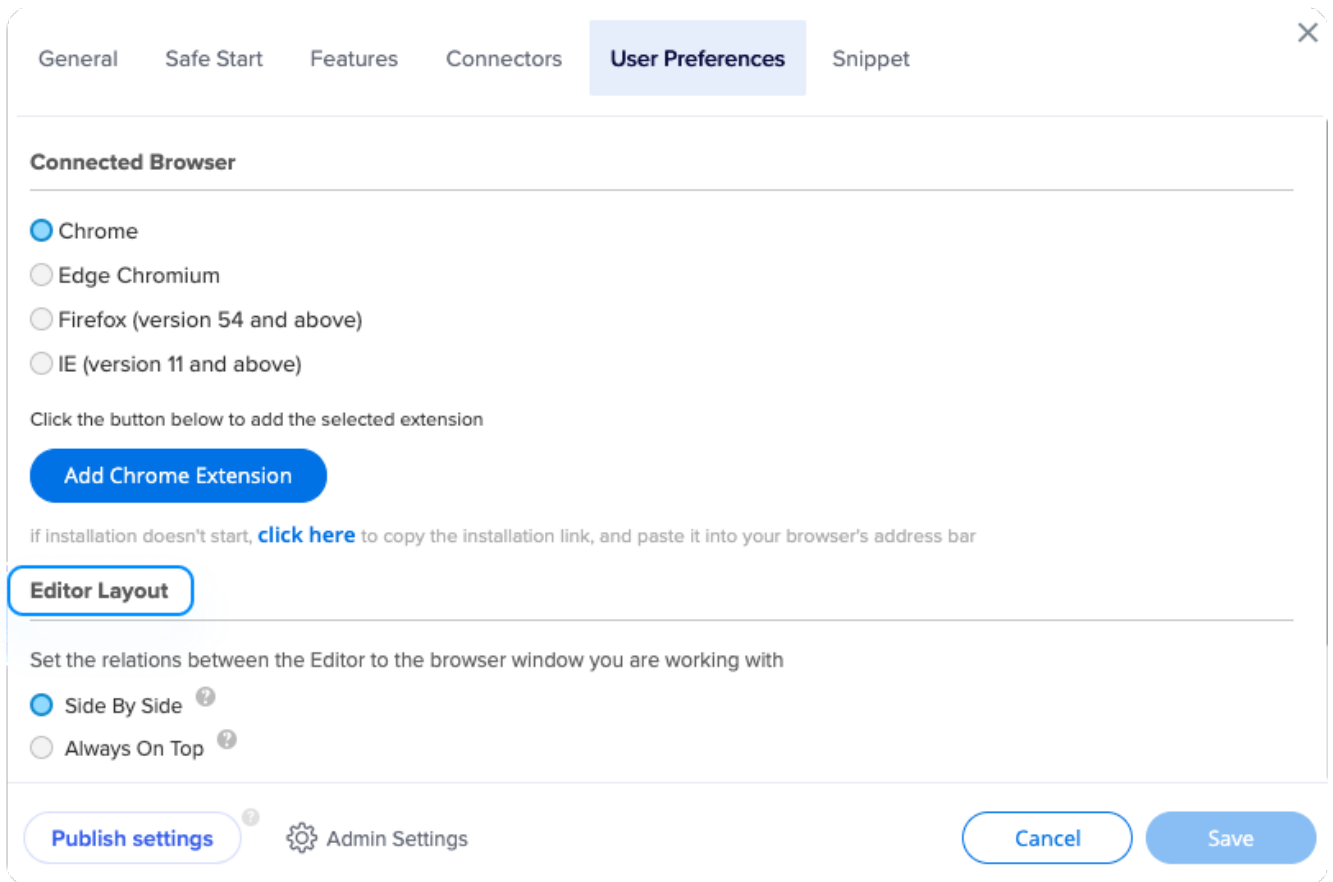

Recommended for sales presentations and working on websites that require the browser to be full width.

- In this mode, the Editor floats above all other windows.
- If you find the Editor obstructing your window's view, press the minimize button to minimize the Editor to the taskbar.
- Press the WalkMe icon on the taskbar to return to working on the Editor.

The Editor's layout mode can be changed at any time.

You can also set the maximum width of the Editor:

- Change from Full Screen to Max width and enter the desired width size of the Editor (Minimum of 1500px).
-  **Note:** Afterwards you must refresh the Editor.
