

Insights: Getting Started Guide

Insights Introduction

WalkMe Insights, accessible at insights.walkme.com, allows you to see how users are interacting with your WalkMe content and your underlying platform. Based on the data collected through Insights, you can identify users' pain points in your platform, and then create new WalkMe solutions to overcome these points.

WalkMe Insights allows you to view the following:

- Real-time analytics
- User engagement data with WalkMe content and your underlying platform
- Accurate re-creations of your users' in-app sessions

Workstation Data Not Supported

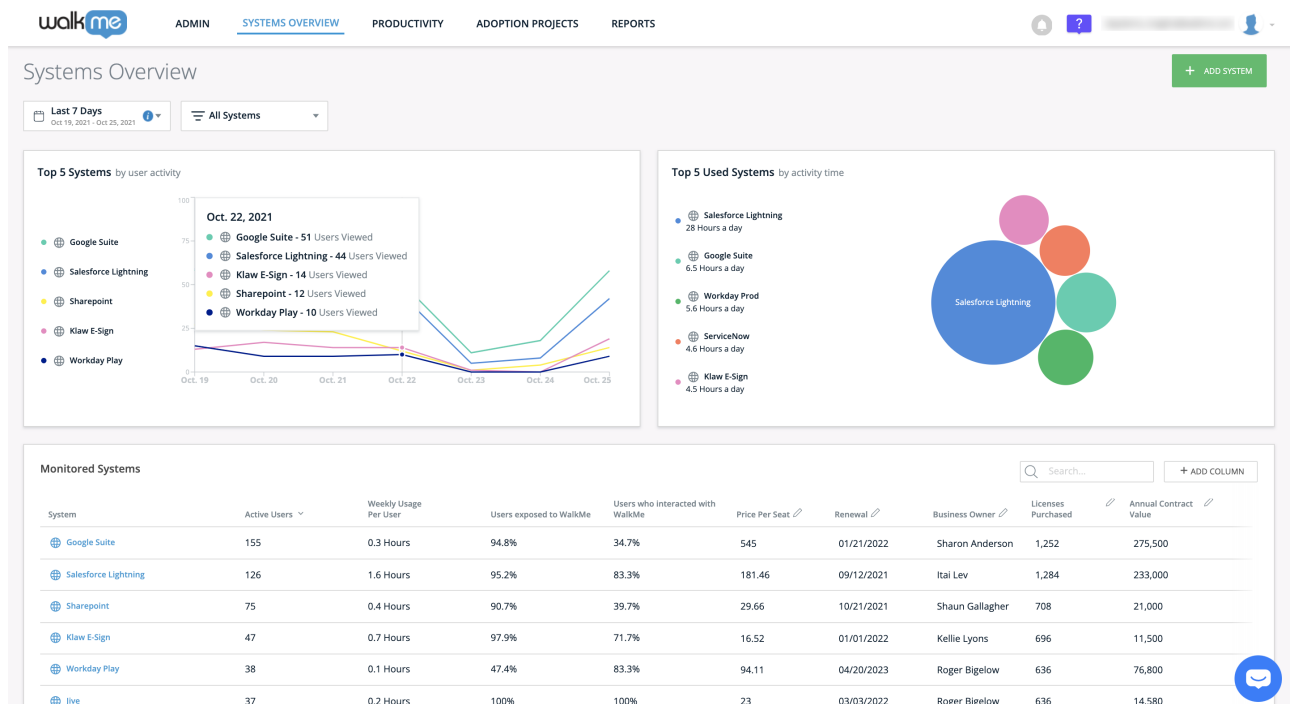

Please note that the Insights feature currently does not support or analyze workstation data. However, we are constantly working to improve our system, and we plan to add support for workstation data in the future. In the meantime, you can still access and learn more about your workstation data from the [workstation dashboard](#) in the console.

Systems Overview

Systems Overview is the main Insights dashboard and default landing page for all accounts with more than one system.

It allows you to monitor system usage from one dashboard and then select which system you would like to view insights for independently from the Monitored Systems table.

Systems Overview

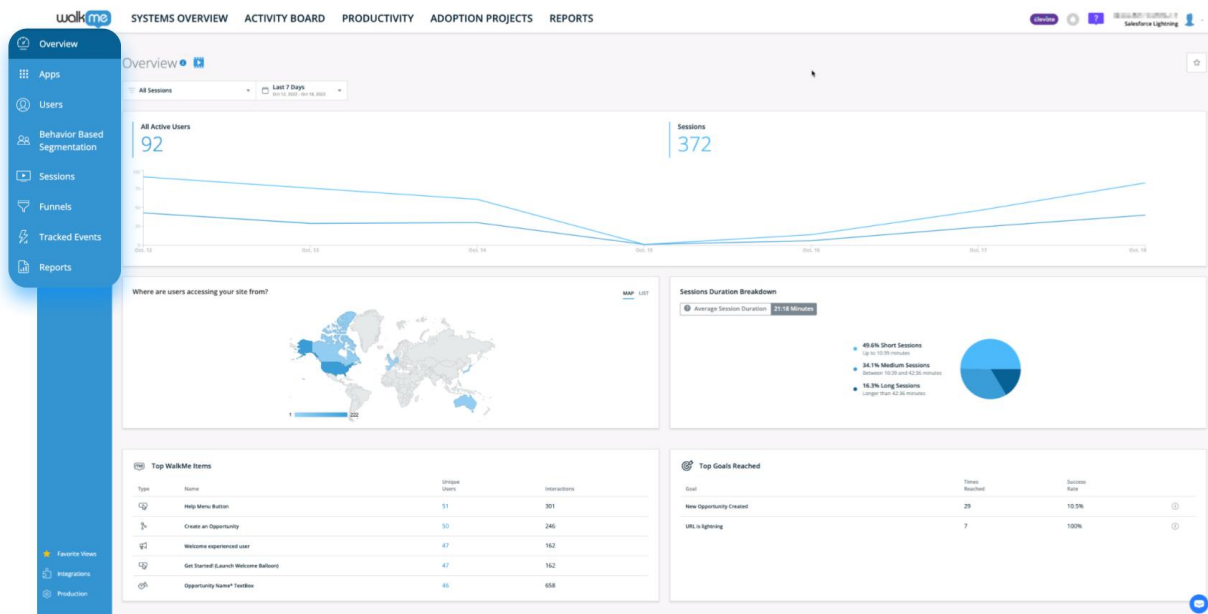

Insights Overview

Clicking on the name of a system in the Monitored System table on the Systems Overview page will open the Insights Overview page for that system. There you can see an overall summary of how users are interacting with the system directly, including several key metrics:

- The number of unique users and sessions over time
- A map of where your users are located
- A breakdown of your average session length
- Top WalkMe items and goals reached

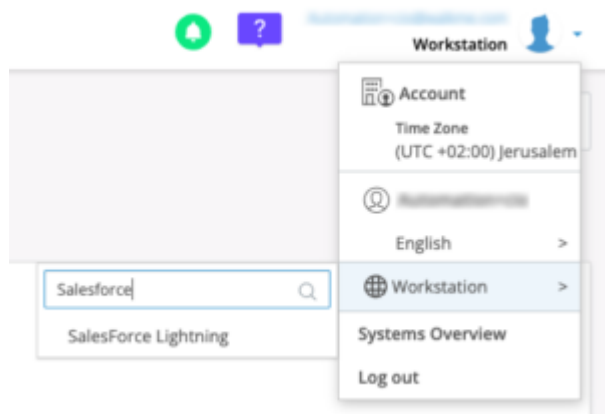

The Overview page will also be the default landing page if an account only has one system.

Insights Overview Page

Tip

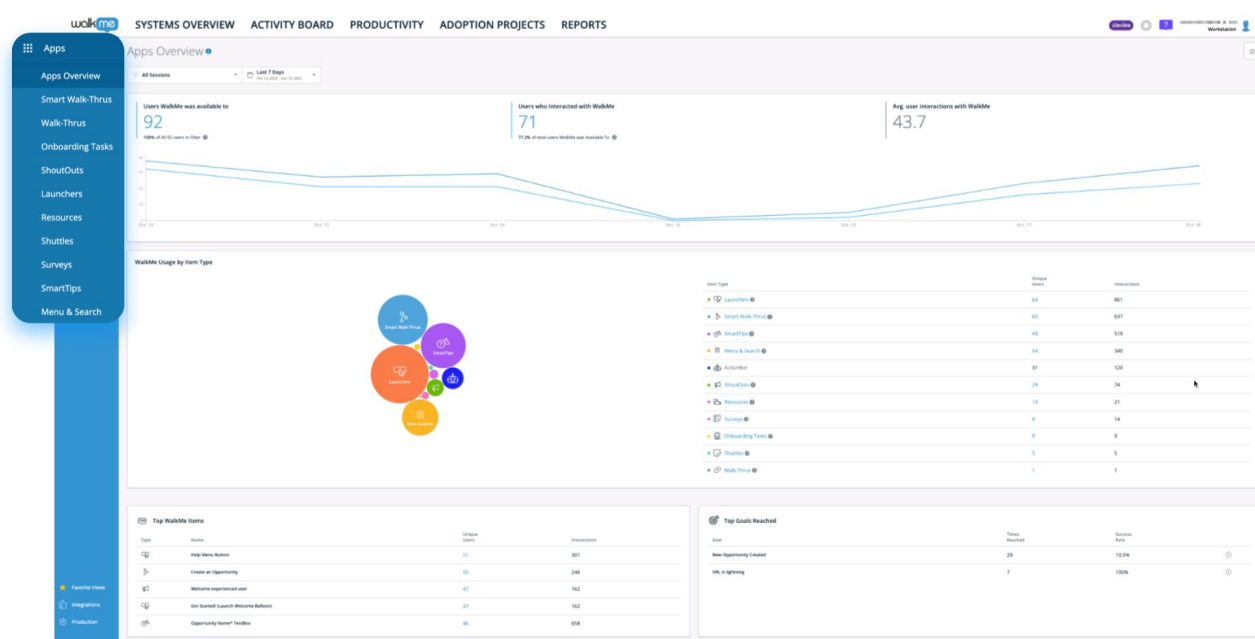

You can use the dropdown in the upper right corner to switch views between your different systems, or quickly return to the Systems Overview page from the header bar.

Apps Overview

In the Apps Overview page, you can view the number and percentage of users who are interacting with your WalkMe content. Here you can also see your most valuable WalkMe items and the top goals reached in Smart Walk-Thrus.

[Insights Apps Overview Page](#)

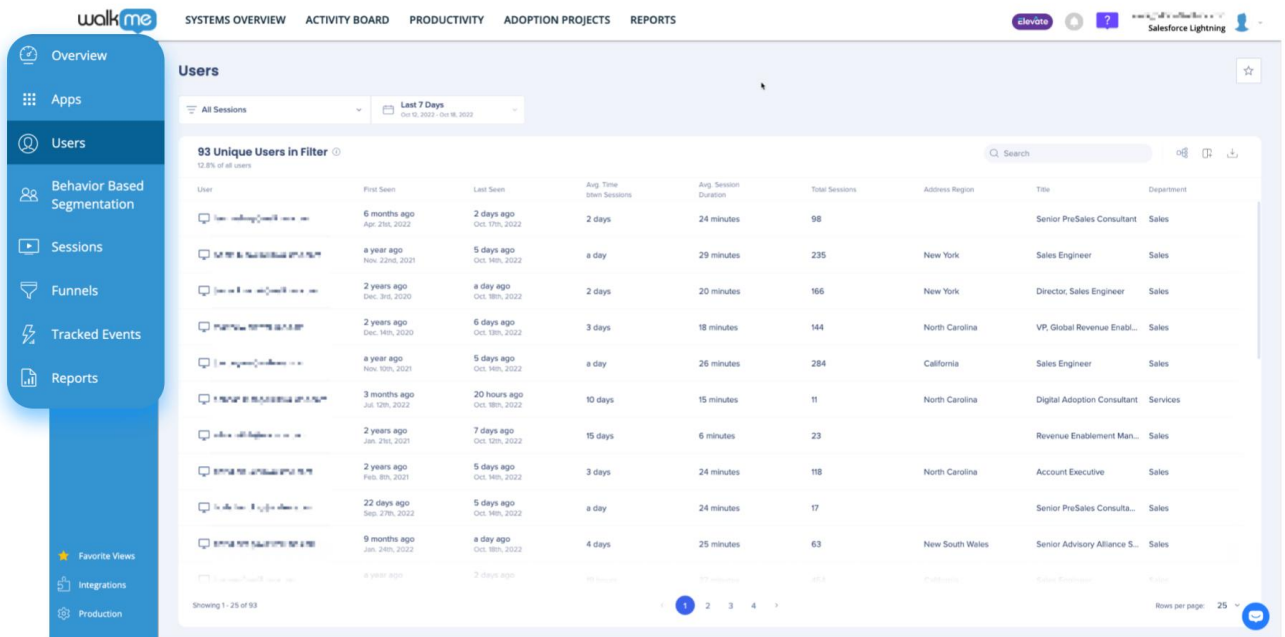

You can further drill down into your WalkMe content by using the WalkMe Apps pages, organized by type (Smart Walk-Thrus, Onboarding Tasks, ShoutOuts, Launchers, Resources, Shuttles, Surveys, SmartTips, Menu & Search).

[Insights Apps Pages](#)

Users

The Users page displays each unique user for the selected sessions. This allows you to see how individual users are interacting with your platform.

[Insights Apps Pages](#)

The screenshot shows the 'Users' page in the WalkMe Insights application. The left sidebar contains navigation options: Overview, Apps, Users (selected), Behavior Based Segmentation, Sessions, Funnels, Tracked Events, and Reports. The main content area displays a table of 93 unique users. The table has columns for User, First Seen, Last Seen, Avg. Time Open Sessions, Avg. Session Duration, Total Sessions, Address Region, Title, and Department. The data is filtered for the last 7 days (Oct 12, 2022 - Oct 18, 2022). The table shows 10 rows of user data, with a 'Showing 1 - 25 of 93' indicator at the bottom. The bottom right corner shows 'Rows per page: 25' and a '25' button.

User	First Seen	Last Seen	Avg. Time Open Sessions	Avg. Session Duration	Total Sessions	Address Region	Title	Department

Tracked Events

Tracked Events allow you to analyze your users' experience with a specific process.

They can help to ensure that users are completing a process that is significant for success on your platform, or any process that users are struggling to complete. You can identify which processes users are struggling to complete based on goals set in your Smart Walk-Thrus.

To track a specific process, it is best to create a series of Tracked Events and link them together using **Funnels**.

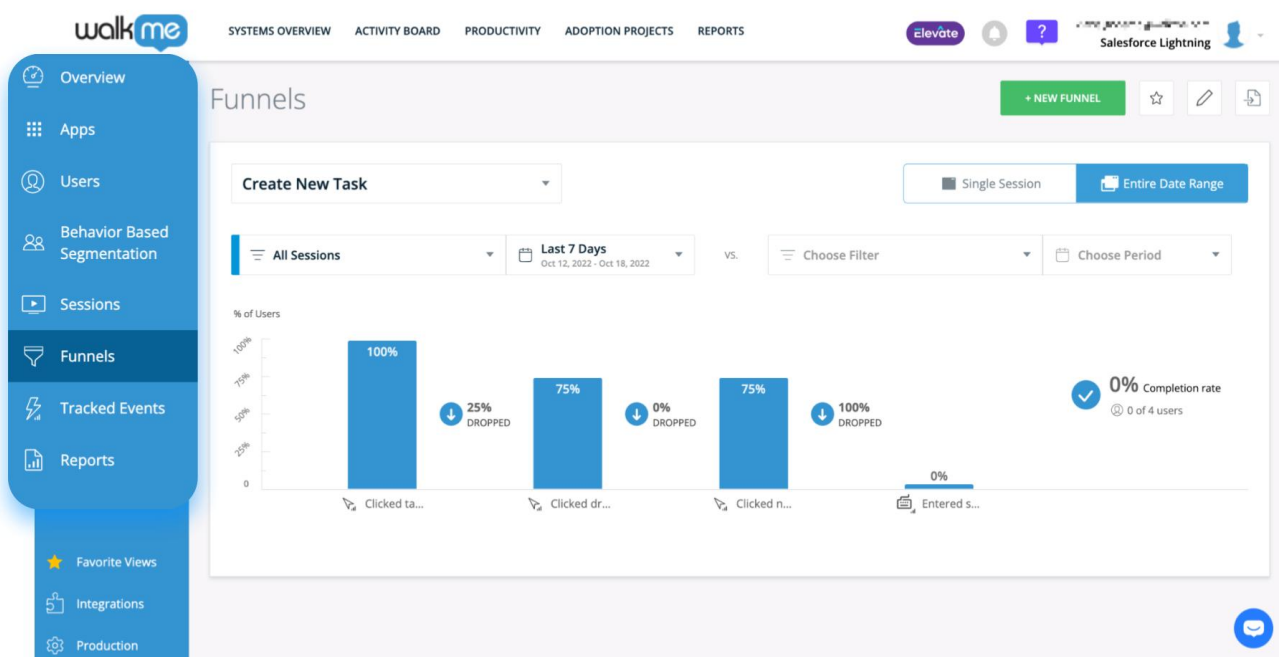

[Creating General Tracked Events in Insights](#)

Funnels

Once you have created a series of Tracked Events, you can create a Funnel that combines these Tracked Events, and allows you to view the Session Playback for the overall process. Viewing sessions that are specific to this process will allow you to identify the specific points in the process that users are struggling to complete.

[About Insights Funnels](#)

Session Playback

Session Playback allows you to view a real-time recreation of your users' experience using your platform. This way you can identify processes that users are struggling to complete. Session Playback is most effective when used in conjunction with the Insights **Tracked Events** and **Funnels** features.

[About Insights Funnels](#)

Reports

Reports allow you to subscribe to reports based on the data collected in Insights.

Integrations

Integrations connects your Insights data with external platforms. This will allow you to collect Insights data based on user behavior in these platforms, and build solutions to address any user issues with these external services.
