

# How to Configure an Amazon S3 Destination in the Integration Center

## Brief Overview

By using WalkMe's Integration Center it is possible to either export Insights reports to an Amazon Simple Cloud Storage (S3) bucket or to pull attributes from an Amazon Simple Cloud Storage (S3) bucket and populate data into WalkMe from for analytics and content segmentation.

## Option A - Authenticate by Credentials

1. In Authentication method choose: "By Credentials"
2. Provide Access Key and Secret Key of your Amazon S3

## New Amazon S3 Integration ✕

1 Set Source & File 2 Select Columns 3 Schedule & Save

---

### Set Source

+ New Source ▼

#### Source Name

#### Bucket

#### Region

#### Authentication Method

<b>Access Key</b>	<b>Secret Key</b>
<input type="text" value="WALKMEAMAZONBUCKETKEY"/>	<input type="text" value="WALKMEAMAZONBUCKETKEY"/>

---

#### Path & File Name

## Option B - Authenticate by Bucket Policy

**(This option can only be used when using the WalkMe S3 Account)**

1. In Authentication method choose: "Bucket Policy"
2. Access a bucket inside the WalkMe S3 account.
3. Inside the Bucket, create a folder and name it "walkme".

4. Add the following to the bucket policy:

```
Code Block | language = xml
{
  "Version": "2008-10-17",
  "Id": "Policy1425481770636",
  "Statement": [
    {
      "Sid": "AllowWalkMeUser",
      "Effect": "Allow",
      "Principal": {
        "AWS": "arn:aws:iam::758936404074:user/ic-s3-external-ops"
      },
      "Action": [
        "s3:ListBucket"
      ],
      "Resource": "arn:aws:s3:::YOUR_BUCKET_NAME"
    },
    {
      "Sid": "AllowWalkMeUser",
      "Effect": "Allow",
      "Principal": {
        "AWS": "arn:aws:iam::758936404074:user/ic-s3-external-ops"
      },
      "Action": [
        "s3:PutObject",
        "s3:DeleteObject",
        "s3:GetObject"
      ],
      "Resource": "arn:aws:s3:::YOUR_BUCKET_NAME/walkme/*"
    }
  ]
}
```

Please Note:

You should replace the `YOUR\_BUCKET\_NAME` above with the actual bucket name

**Set Destination**

+ New Destination ▼

**Destination Name**

My Destination Name

**Bucket** my-bucket-name **Region** US West (N. California) ▼

**Authentication Method** Bucket Settings ▼ [? How to setup my Amazon S3 Bucket settings?](#)

---

**Region**

US West (N. California) - us-west-1 ▼

## Option C - Authenticate by IAM Role

This option enables adding an S3 bucket destination by having the client create an IAM role that can access their S3 bucket, and enabling WalkMe to assume that role to access it.

1. Create S3 bucket with name <bucket-name>
2. Create IAM Role with the following permissions and trust relationship:
  1. IAM Role permissions:
    - Replace ' <bucket-name> ' with actual bucket name

```

{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "AllowWalkMeRole0",
      "Effect": "Allow",
      "Action": "s3:ListBucket",
      "Resource": "arn:aws:s3:::<bucket-name>/"
    },
    {
      "Sid": "AllowWalkMeRole1",
      "Effect": "Allow",
      "Action": [
        "s3:GetObject",
        "s3:PutObject",
        "s3:DeleteObject"
      ],
      "Resource": "arn:aws:s3:::<bucket-name>/*"
    }
  ]
}

```

## 2. Trust relationship:

```

{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Principal": {
        "AWS": [
          "arn:aws:iam::758936404074:role/integrateme-ecs-instance-production",
          "arn:aws:iam::758936404074:role/rundeck-worker",
          "arn:aws:iam::758936404074:role/chatbot-asg-prodeu",
          "arn:aws:iam::758936404074:role/rundeck-worker-eu"
        ]
      },
      "Action": "sts:AssumeRole",
      "Condition": {}
    }
  ]
}

```

## 3. In the Integration center – S3 destination setup form:

1. Under *Authentication Method* select: "IAM Role – Bucket on Customer's side"
2. Enter the IAM role ARN value, <bucket-name> and its region

The screenshot displays two side-by-side browser windows. The left window shows the 'walkme' application interface with a 'New Amazon S3 Source' modal form. The right window shows the AWS IAM console for the role 'test-iam-walkme-role1'.

**Left Window: New Amazon S3 Source Form**

- Source Name: test-iam-walkme
- Authentication Method: IAM Role - Bucket on Customer's side
- Bucket Name: test-iam-walkme
- Optional Bucket Path: e.g. your/bucket/path
- Enter ARN for IAM Role: arn:aws:iam::581874099531:role/test-iam-walkme-role1
- Region: Choose region

**Right Window: AWS IAM Console Summary**

**Summary**

- Role ARN: [arn:aws:iam::581874099531:role/test-iam-walkme-role1](#)
- Role description: Allows S3 to call AWS services on your behalf. [Edit](#)
- Instance Profile ARNs: /
- Path: /
- Creation time: 2021-08-17 14:11 UTC+0300
- Last activity: Not accessed in the tracking period
- Maximum session duration: 1 hour [Edit](#)

**Permissions**

You can view the trusted entities that can assume the role and the access conditions for the role. [Show policy document](#)

[Edit trust relationship](#)

**Trusted entities**

- arn:aws:iam::758936404074:role/chatbot-asg-prodru
- arn:aws:iam::758936404074:role/rundeck-worker-eu
- arn:aws:iam::758936404074:role/integrateme-s3-instance-production
- arn:aws:iam::758936404074:role/rundeck-worker

**Conditions**

There are no conditions associated with this role.
