

Mobile Element ID Property for iOS UIView

Brief Overview

Starting from **SDK version 1.18.0 and above**, WalkMe Mobile supports setting a property to UIView to set a unique id to your views. When used, WalkMe will rely on the value of the Element ID property to identify elements in Walk-Thrus, segmentation, and Rule-Based Goals.

Note that a prerequisite of using the API is importing WalkMeSDK.

How to Implement the Element ID Property

Objective C:

```
someview._wm_elementID = @"my_unique_element_id"
```

Swift:

```
someview._wm_elementID = "my_unique_element_id"
```
