

Product Updates: July, 2021

Your DAP Experience

July 2021 | Product Release

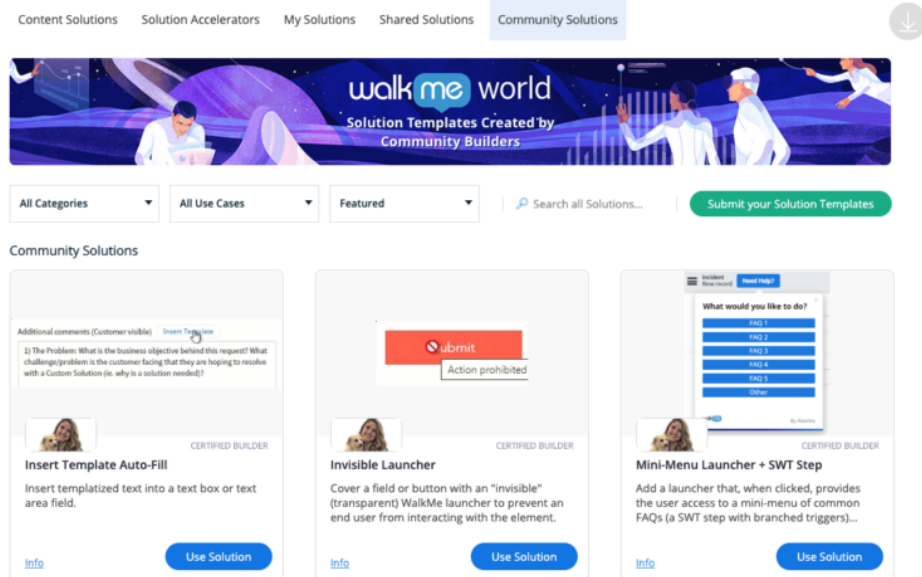

How Will I Receive New Updates?

New updates to WalkMe became available on July 26, 2021. Read below to learn more about the new features that are available.

Your current implementation will not be affected by the updates until you publish again. Please refer to the [How to Publish Global Settings article](#) for more information. For customers that run WalkMe on their local servers, contact your Customer Success Manager or WalkMe contact to learn how you can gain access to these new features.

The July Product Release Webinar recording can be found [here](#)!

Community Solutions Templates

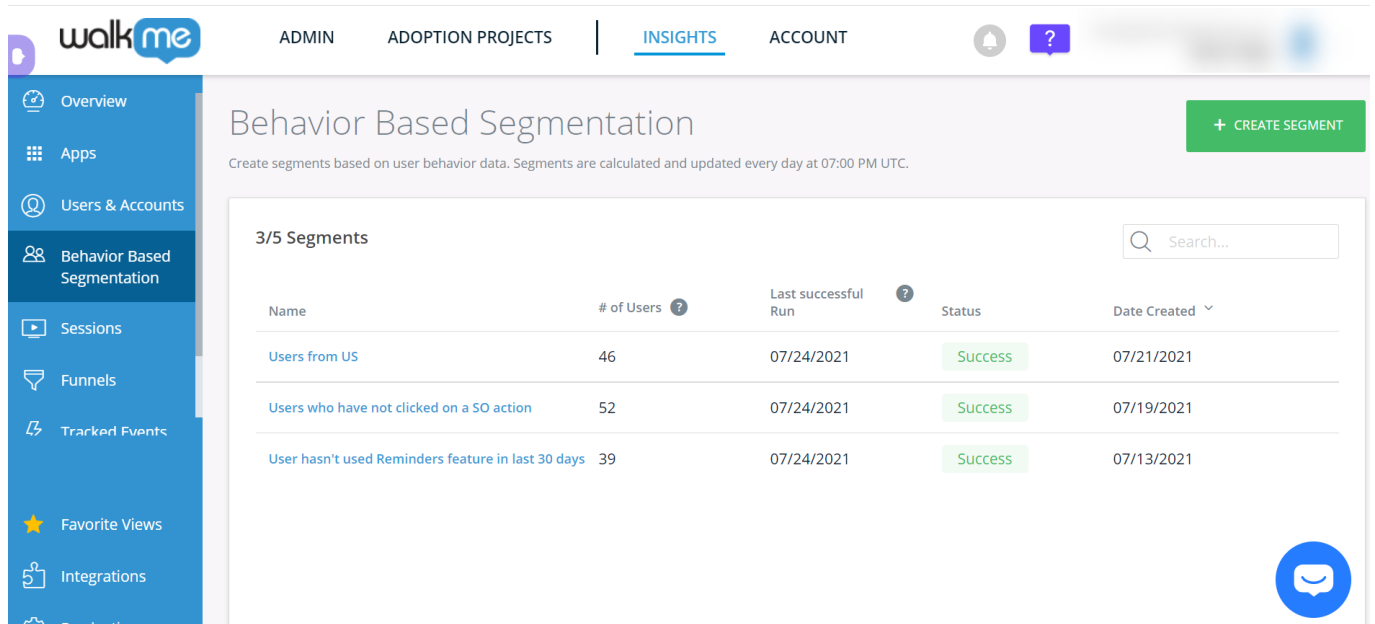

The Community Solution Templates is a gallery of pre-built WalkMe content by WalkMe Community members, certified Partners, and certified Solution Engineers, bringing the WalkMe Community of DAP Professionals together to share & re-use WalkMe content.

With these templates you can:

- Share best practices across DAP Professionals
- Decrease effort & resources required to scope and build WalkMe content
- Showcase your WalkMe content and offerings for other builders to leverage and learn from
- Earn challenge points in WalkMe World

Behavior Based Segmentation

Behavior Based Segmentation

Create segments based on user behavior data. Segments are calculated and updated every day at 07:00 PM UTC.

3/5 Segments

Name	# of Users	Last successful Run	Status	Date Created
Users from US	46	07/24/2021	Success	07/21/2021
Users who have not clicked on a SO action	52	07/24/2021	Success	07/19/2021
User hasn't used Reminders feature in last 30 days	39	07/24/2021	Success	07/13/2021

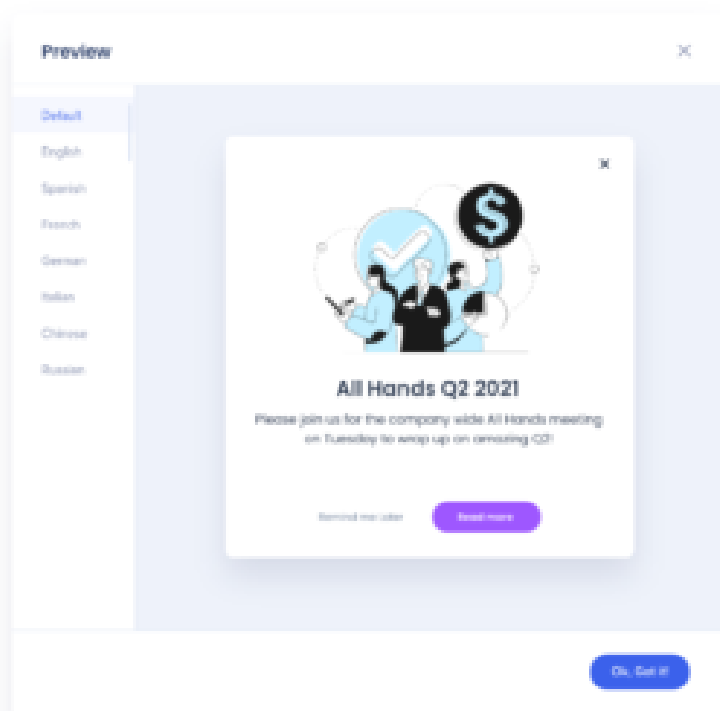

Behavior Based Segments provide you with the ability to segment WalkMe content based on user engagement with another WalkMe deployable or specific interaction with the underlying application.

This segmentation allows you to:

- Leverage data to accurately target users based on their specific actions with WalkMe or the underlying application
- Make the end-user experience more personalized

Multi-Language Enhancements

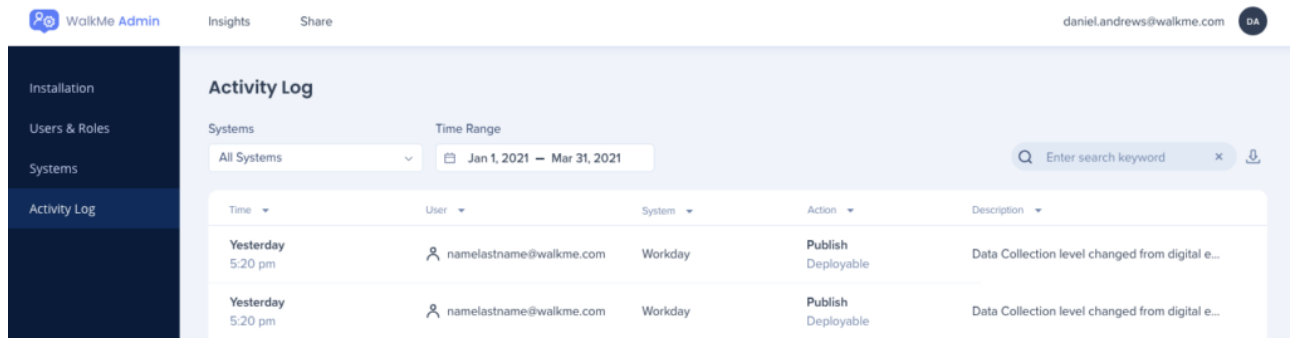

In this release, there is a new and improved version of the Text & Multi-Language UI for translating content.

With the new enhancements:

- Previewing content in another language is 20x faster
- There is an overall better UI/UX experience for WalkMe Builders & Translators
- Save time by continuing other tasks while importing/exporting content and importing multiple files at once
- Ensure intended content experience with additional validations

Activity Log Enhancements

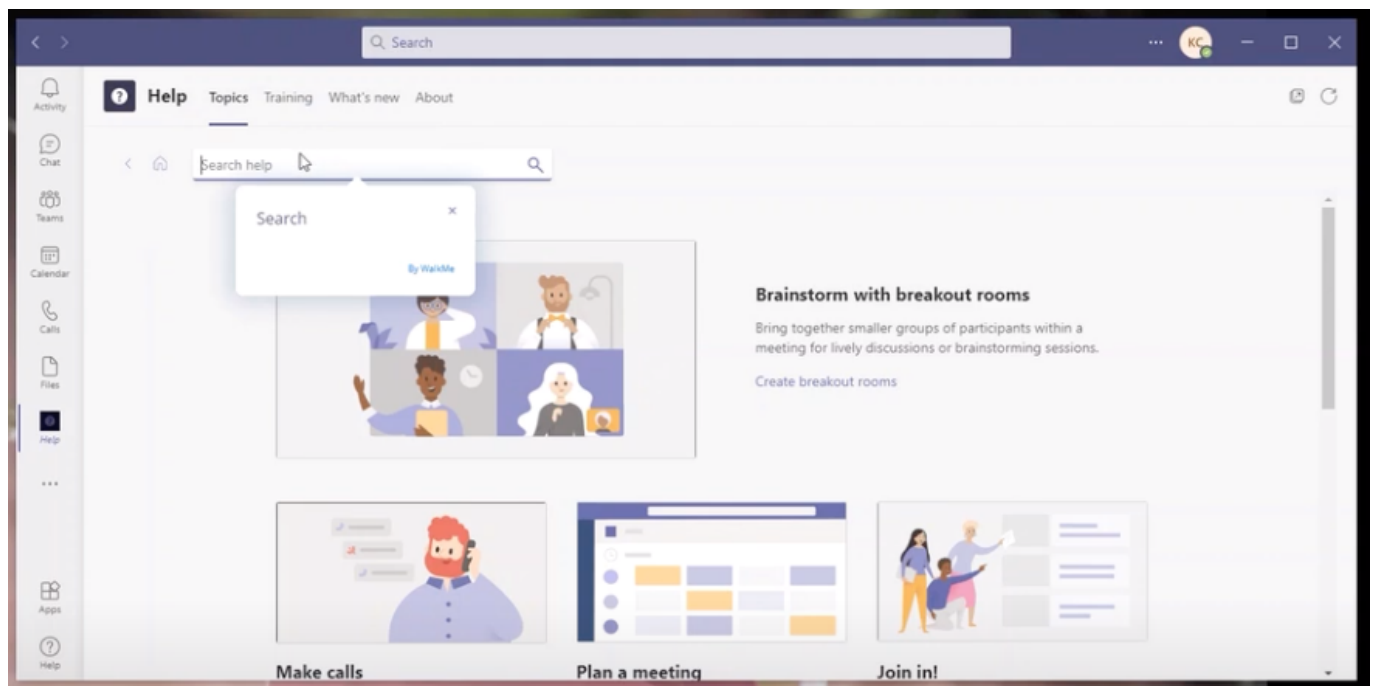

The newly updated Activity Log is a cross-application log of all WalkMe events, providing WalkMe Admins with a single point of truth and enhanced visibility into WalkMe activities.

With these new capabilities, you will have:

- Increased productivity by viewing a consolidated list of all systems events instead of switching between systems
- More independence regarding WalkMe events and understand the Root Cause Analysis (RCA) without relying on WalkMe Support team
- Real time troubleshooting available on your own

Microsoft Teams for Desktop

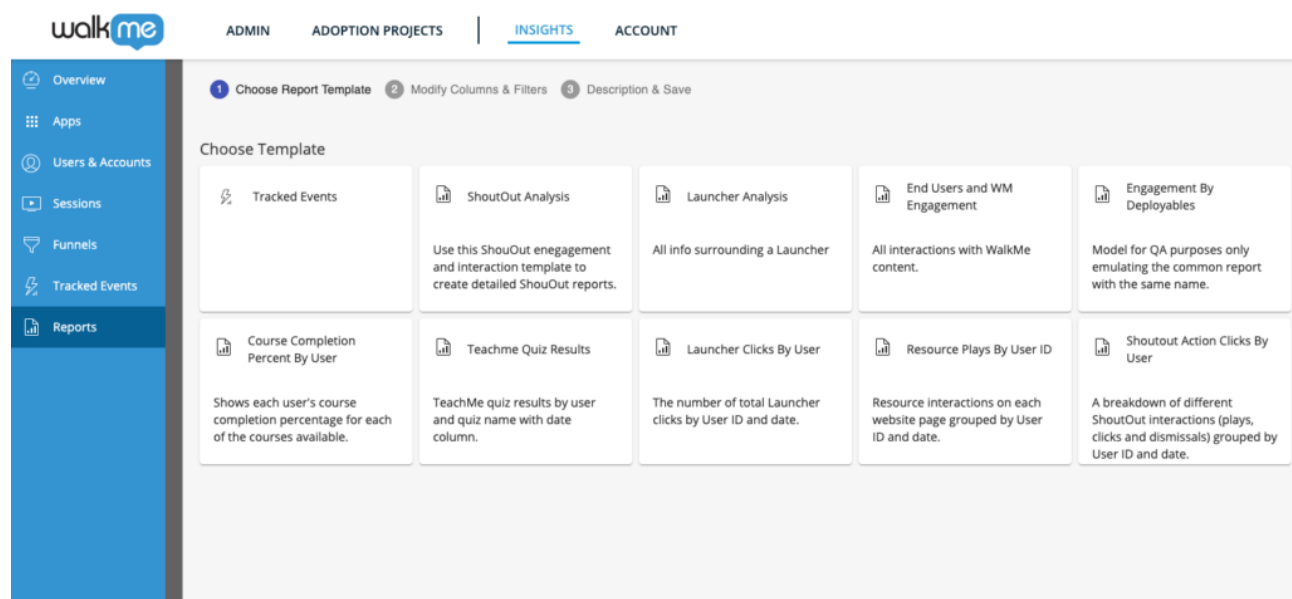

WalkMe on Microsoft Teams Desktop application brings all of WalkMe's capabilities, directly on Microsoft Teams Desktop application.

These capabilities allow you to:

- Increase employee self-sufficiency & productivity
- Easily migrate and onboard employees to Microsoft Teams
- Bring employees directly into the applications from their Desktop
- Encourage employees to engage with new, underutilized, or complex feature
- Reduce support for how-to questions

Report Builder

Custom reports allow you to create your own reports from templates based on WalkMe Insights data.

With custom reports you'll be able to:

- Gain desired visibility into your WalkMe and application data
- Become more self-sufficient by creating custom reports, on demand

Rollout: Coming soon! Stay tuned.
