

Quick Workstation Commands (Slash Commands)

Brief Overview

Slash commands are shortcuts that perform various tasks and access specific features within Workstation for desktop. Whether you want to clear update history with a simple “/clear-updates-history” command or navigate through integrations setup with “/integrations-wizard,” these commands make it easy to execute actions directly from the search bar.

Get to Know

Executing a command is simple:

1. Open the Workstation App
2. Type the command, including the slash, in the search bar
3. If the command was successful, it will disappear from the bar
 - Depending on the command you entered, you will be directed to the relevant page automatically. For example, if you use the “/integrations-wizard” command, it will launch the onboarding experience. Conversely, certain actions like clearing cache can be completed instantly with the “/clear-cache” command.

Available Slash Commands

Command	Description
/clear-recent-search	Clear the recent results the user found relevant and clicked them.
/clear-search-hints	Clear the recent search suggestion from the Workstation memory.
/clear-drive-widget	Clean up the cached version of Google Drive Widget
/refresh	Refreshing the SDK content
/close	Closing the Workstation App
/change-env	Change environment (Production, Test and Success are supported) Learn more about the change environment command
/editor-mode-on	Enter Play/Preview Editor mode Learn more about the preview content command
/clear-cache	Clear Workstation network session.
/integrations-wizard	Displays the integrations setup wizard (this also initiates the onboarding experience)
