

# Stop WalkMe API

## Overview

The Stop WalkMe API is a fail-safe mechanism designed to let developers control when WalkMe's SDK operations will be terminated from the app. It is **supported from SDK version 1.16.0 and above** and can only be called if a WalkMe session is at least a 30 seconds old.

## How to Implement the Stop API

### Android Apps

```
/**
 * Stop ABBI SDK.
 *
 * This method can be called only after {@link #start(String, String,
 Application)} was called first.
 * Stop abbi SDK is allowed if old session is at least 30 seconds old
 */
@SuppressWarnings("unused")
public static void stop() {
}
```

### iOS Apps

```
/**
 * Stops ABBI SDK
 */
+ (void)stop;
```
