

Workday®: What is WalkMe for Workday®?

Brief Overview

Workday® is a cloud-based HRM system used by large enterprise companies. An HRM system is a form of HR software that combines a number of necessary HR functions, such as storing employee data, managing payroll, recruitment processes, benefits administration and keeping track of attendance records.

Since users often use HRMs infrequently, they can forget how to complete these processes, resulting in wasteful support calls. Additionally, dealing with numerous fields can be confusing, potentially leading to costly errors or time-consuming data entry. **This is where WalkMe comes in!** WalkMe solves these problems by providing **timely and effective support**.

Use Cases

- Assist end-users in setting goals.
- Remind end-users to complete sporadic processes such as performance reviews.
- Help end-users properly complete complex or multi-step processes such as job requisitions.
