

Workstation - Bing Custom Search Integration

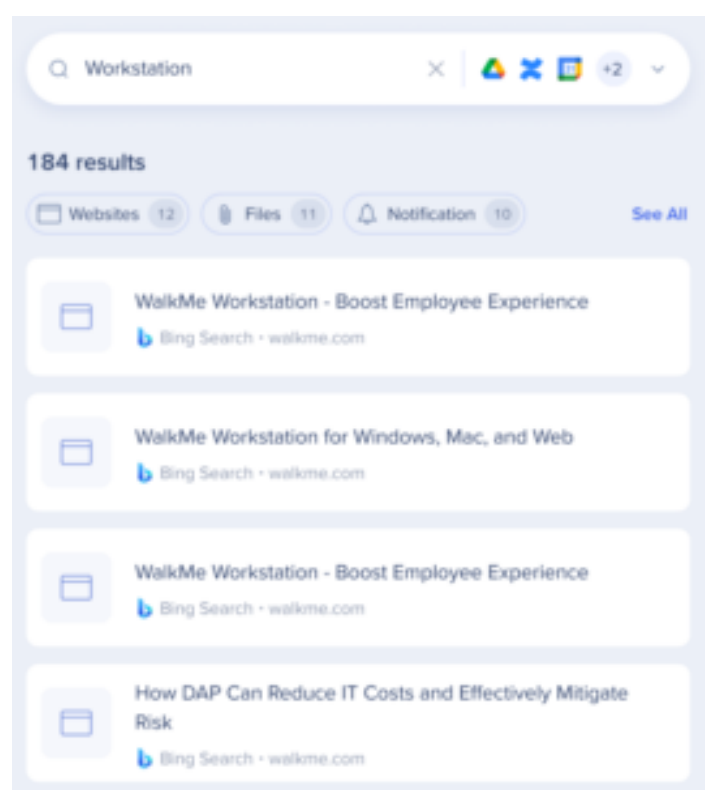

Brief Overview

Bing Custom Search allows to build a customized search that fits users' needs.

This integrations connects Workstation with the Bing Custom Search, to enable users to search for public web pages directly from Workstation's enterprise search.

Capabilities

Search from Workstation for web pages according to your Bing's custom search configuration.

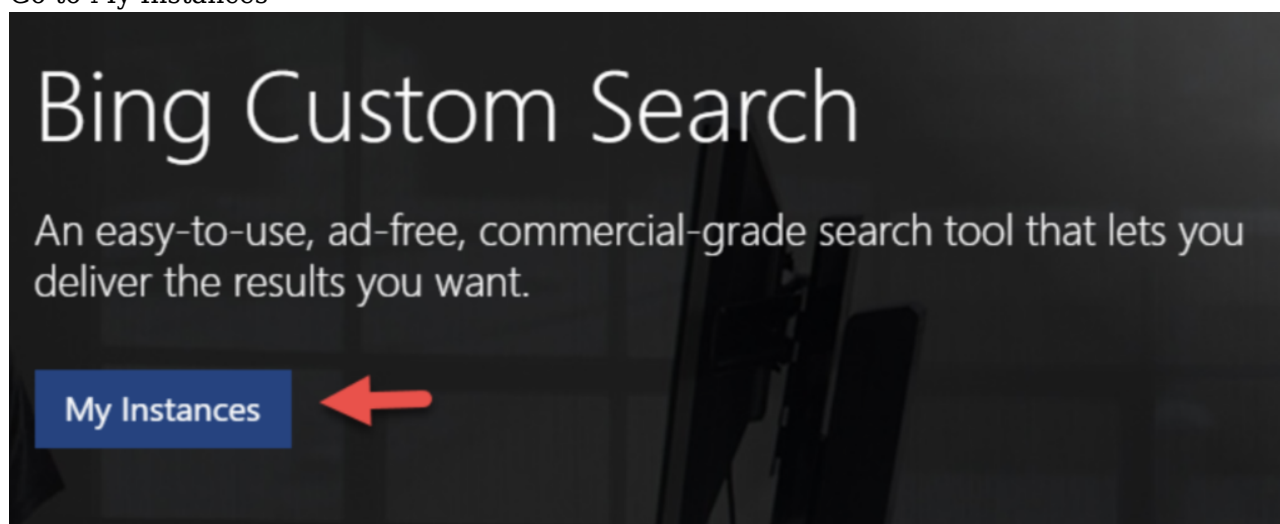

Security Overview

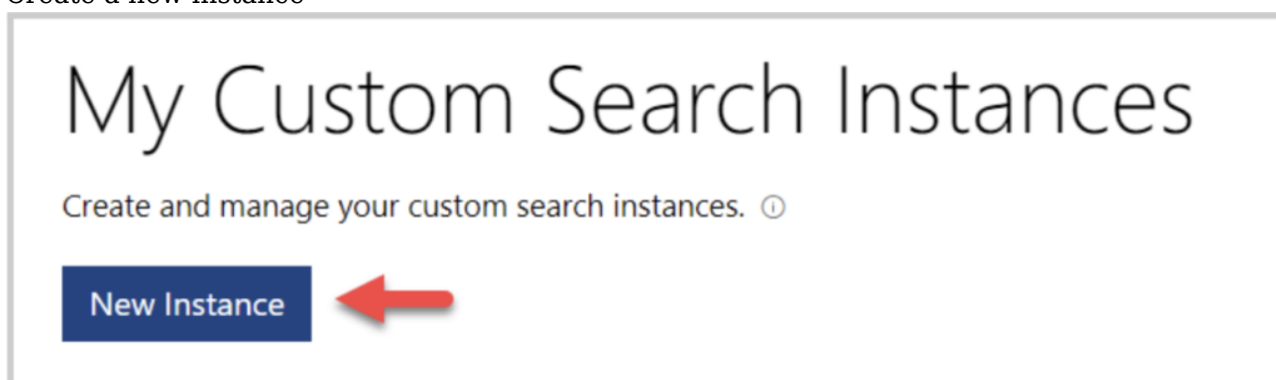

Read more about [Workstation's integration security](#) and [Workstation's Enterprise Search](#).

Create a Bing Custom Search instance for Workstation Search

1. Go into Bing's website for [creating a Custom Search instance](#)
2. Go to My Instances

3. Create a new instance-

4. Add the websites you would like to be part of the search to the active list.

The active list is empty.
Enter a URL and click on '+' to add it.

+

☒ Include Subpages

5. Go to Summary and copy the Custom configuration ID.

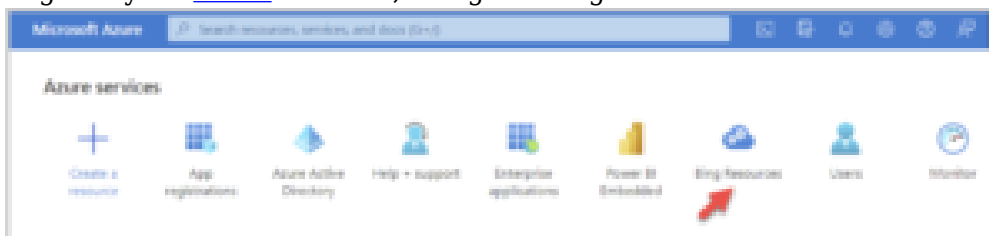

{ } Endpoints

General

Custom configuration ID 1191c14

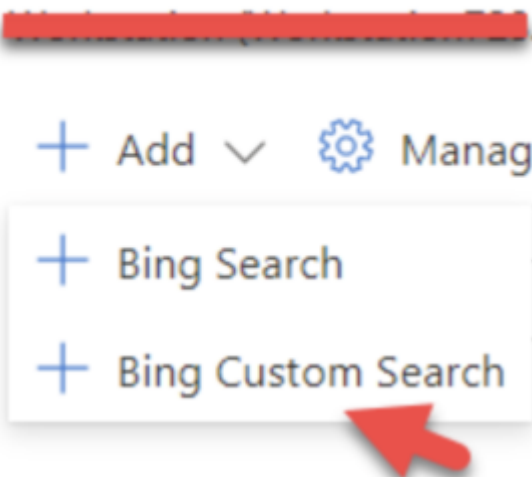

Published state Last pub

6. Login to your [Azure](#) instance, and go to Bing Resources-

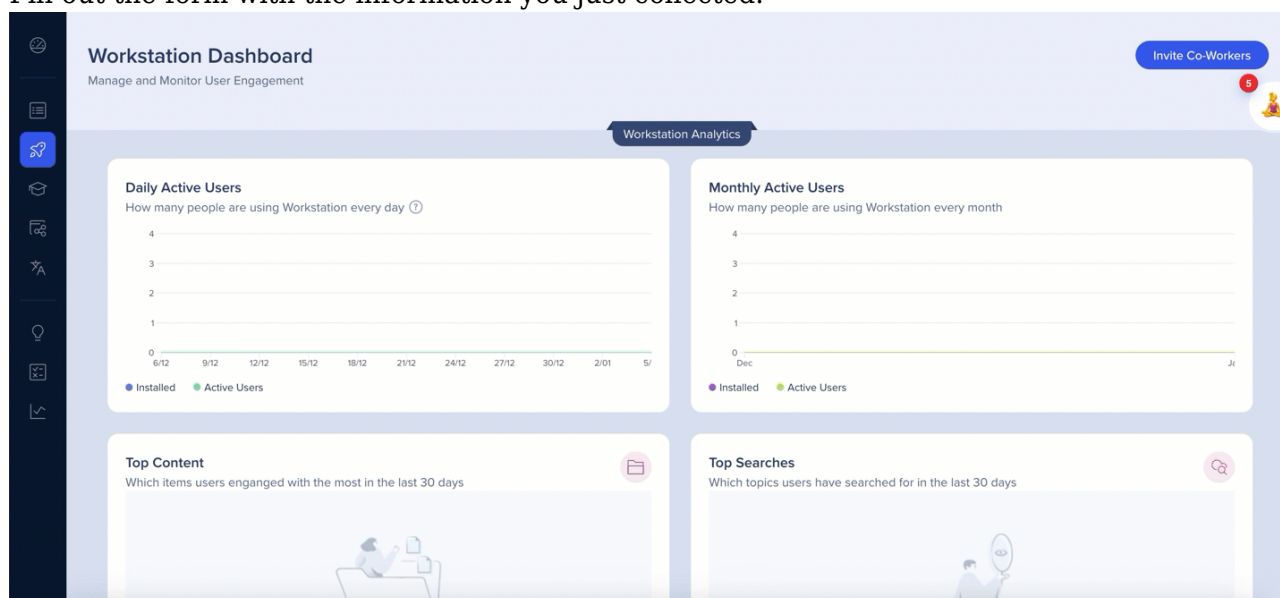

7. Add a new Bing Custom Search-

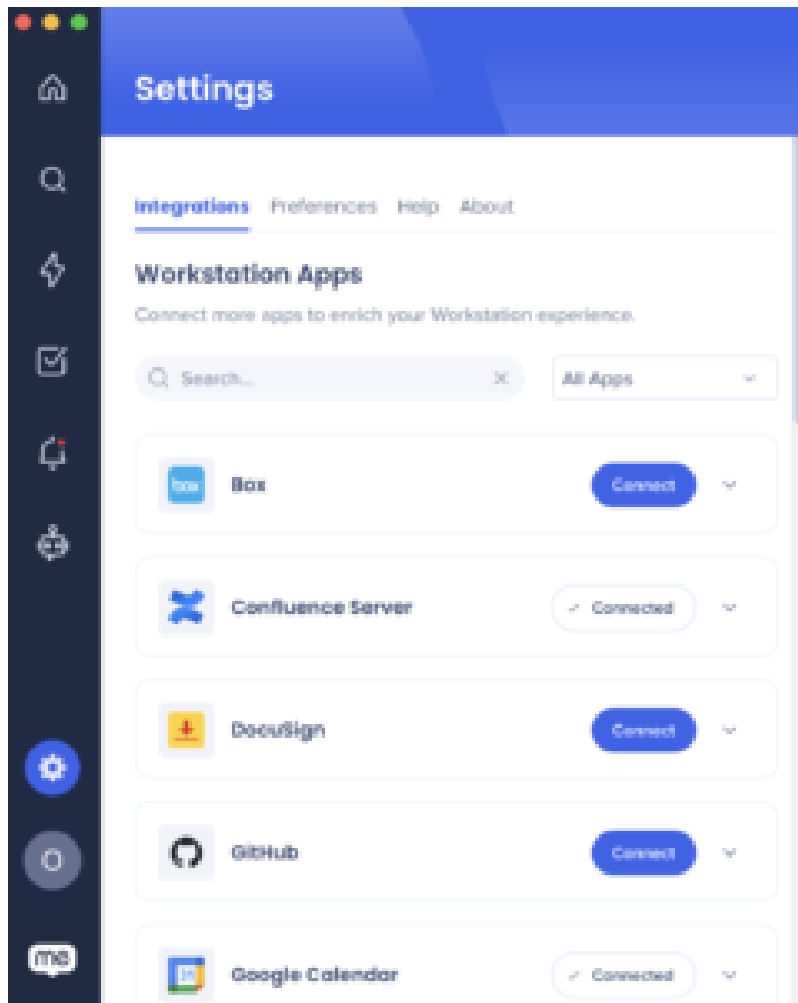

Bing Resource

8. Enter the resource, go to Keys and Endpoints.
9. Generate a key and copy it.
10. Now it's time to configure the parameters in the Console to complete the setup: Go go the WalkMe Console -> Workstation -> Integrations->
11. Click the Setup button on the Bing integration.
12. Fill out the form with the information you just collected.

13. The integration will appear in the Integrations tab of the app's Settings

Segmentation

Integrations can be segmented to a sub-set of users and audiences, rather than being enabled for all end-users. This feature streamlines the integration process and helps to ensure that users are only using the integrations that are relevant to their work.

To segment a Workstation integration:

1. Navigate to the [Workstation Integrations page](#) in the console
2. Click the **All** button on the integration you would like to segment
3. Click **Select specific recipients** in the Manage Access popup
4. Select the audiences or individual users from the dropdowns to handpick who can use the integration
5. Click **Apply**
