

Workstation Release Notes - 15 November 2022

Brief Overview

This article describes the new Workstation capabilities and bug fixes included within the version released on **November 15th, 2022**.

Communication Center Analytics

- Customers can now toggle between legacy version and electron version analytics
- Electron-based analytics will be shown automatically if most of the customer's end-users have transitioned to Electron

Keyboard Shortcuts

- We allow to control the entire WS desktop app using only the keyboard. That is part of the WCAG 2.1 AA Accessibility standards
- Clicking the Tab key allows to navigate through interactive elements on Workstation - the search, widgets, items
- A visual indicator is displayed, highlighting the element that currently has the keyboard focus. The focus indicator is a border or highlight (called an outline) around the focused element

Salt Stability Task

Salt is an encryption on the access token we use to connect with API's (on a user level).

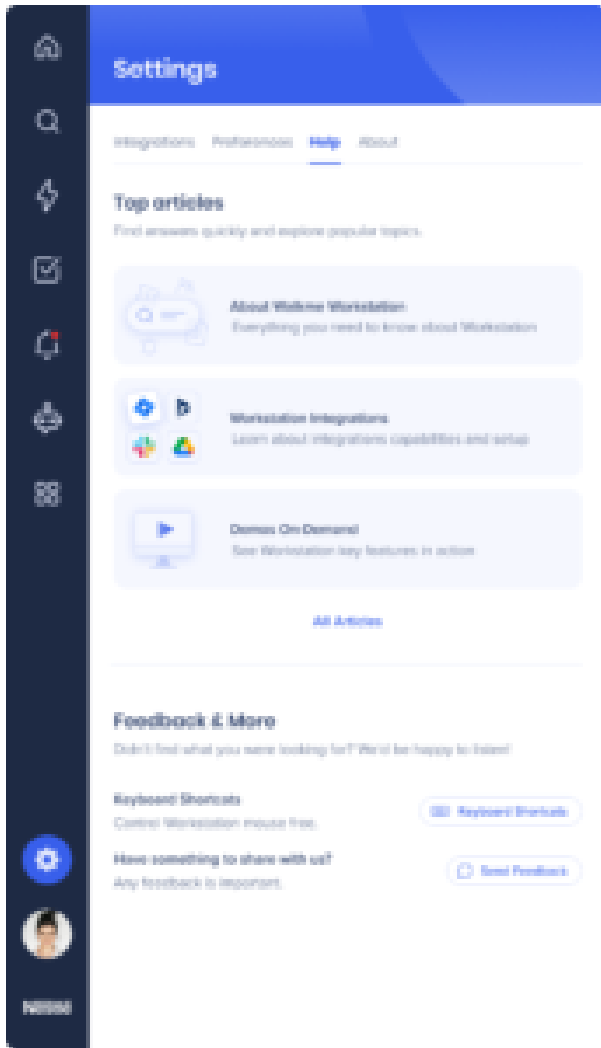

If we detect a connectivity issue related to Salt, we automatically do the following -

1. Disconnect the app that has the salt issue
2. Display a toaster notification on the UI

Help Page

- The place we teach the user about Workstation, collect feedback, and display the features of our app

Enhancement

- App Running/Not Running rule evaluation is no longer case sensitive
