Latest Version

	Container	App
Version	Electron (2.9.0-0)	1.27

Get to Know

Version Structure

Workstation version comprises two components: The **Container** version and the **App** version.

- **Container** is the Electron component that serves the app. It's a binary software that requires an installation by the end-user or the company IT.
- **App** refers to the Workstation user interface (UI), Enterprise Search, homepage widgets, and

everything related to the interface end users engage.
- The app structure is System as a Service (SaaS) so it gets updated continuously and doesn't require action to update.

Find Version

To know which Workstation version you have, go to **Settings -> About** and it's at the top of the page. Click the **copy icon** next to is to copy the version.
